CUM HOC VOLUME

D. D.

SOCIETAS METEOROLOGICA
PALATINA.

P R A E F A T I O.

In tempore, quod anno' superiore 'pro singulis Ephemeridum nostrarum tomis in nundinas Lipsienses praestituimus, comparet tomus hic secundus, primo multo uberior & locupletior, seu multitudinem observationum, seu varietatem spectes. Observatores multi symbolam suam hoc anno contulere, quam conferre varias ob causas anno superiore nondum poterant. Alii novi generis observationibus opus ditarunt, quo illae inprimis spectant, quas cl. van der Wey de de acus

P R A E F A T I O.

magneticæ declinatione, tum quas viri doctissimi Bugge, Vianello, van de Perre, de maris aestu instituerunt. Nonnulli ex observationibus suis nova confectaria coëgere, qualia ad calcem observationum Manheimensium aliarumque videre est. Hujusmodi etiam Erfordia accepimus, sequenti modo inscripta: *Beobachtungen der veraenderungen der witterung und der luft in Erfurt vom jare 1782* *). Sed praeclaram hanc lucubrationem, quae novas etiam observationes mutationum barometri ingruentibus tempestatibus & procellis continet, latine reddi a nobis tempore exclusis, & inferi huic volumini non potuisse dolemus. Observatores duo, scilicet cl. Steiglehner & Planer, dissertationes insignis argumenti miserunt, ille *de varia atmosphaerae pressione*, hic *de oscillatione mercurii in tubo Torricelliano*. Priorem observationibus hujus tomi Ingolstadiensibus subjunximus, posteriorem in tomum proximum reservavimus, quod illam excudi hoc anno temporis angustiae nullo modo permiserint.

Eadem temporis penuria factum est, ut summas confectarias, a cl. focio nostro indigena Koenig ex universis hujus anni observationibus

P R A E F A T I O.

bus confectas, & ad prælum paratas, foras dare cum hoc volumine non possemus. Ad Ephemerides igitur anni 1783 rejectae sunt, quibuscum certo prodibunt, sicut cum praesentis anni 1782 observationibus confectaria illa universalia prodeunt & distribuuntur, quae ab eodem Koenigio, & piaenunc memoriae Mayero, focio & astronomo nostro, elaborari in praefatione tomi primi diximus. Tribus haec foliis continentur, praefixa inscriptione: *Appendix ad observationes anni 1781*. Interim affirmare possumus, omnia a nobis jam ita disposita esse, posthac ut nihil relinqueretur, iis tamen lucubrationibus forsan exceptis, quae latine scriptae non sunt, nam cum ingens machina identidem ampliatur, motus ejus tantas omni parte curas postulat, vix ut locum versionibus sit daturus, quas proinde cogimur humanissime deprecari.

Fines stationum nostrarum variis locis hoc anno prolati fuere. Novam primam Claudiaae Fossae (ital. Chiozza) in ditione veneta curis cl. focii nostri Toaldo, alteram Metelloburgi in Zelandia belgica nati sumus. Quae ad utrumque locum attinent, ea cum ex subjectis observationibus, tum ex iis videre licet, quae tomo primo pag. 44 & 45 diximus.

Post

*) Id est, observationes variationum tempestatibus & aëris Erfordiae an. 1782.

P R A E F A T I O.

Post haec instrumenta nostra sedem Divione felicissime consecutâ sunt. Cum enim regia scientiarum academia, quae in hac urbe est, in societatem laborum nostrorum venire desideraret, secretario suo perpetuo Mareto in mandatis dedit, hanc suam voluntatem ut nobis significaret. Jussa hic explevit literis humanissimis 19 Novembris ad societatis nostrae secretarium datis, quibus inter alia haec (lingua vernacula) scribit. *Injunctum mihi est ab academia nostra, ut ejus nomine instrumenta meteorologica ab erudita societate vestra petam, fidemque vobis faciam, illam receptis his instrumentis curaturam, ut observationes iis perpetuae fiant, vobisque quotannis mittantur.* Divionem dein cum perlata instrumenta fuissent, idem Mar etus in hunc modum ad secretarium nostrum rescripsit. *Reddita mihi tandem sunt instrumenta a clarissima societate vestra academiae nostrae missa, cui illa exhibui. Salva & illaesa omnia adlata sunt, teque jussus sum rogare, ut illustri societati vestrae gratissimum nostrae animi declares. Spondet haec, veluti ad te scripsi modo, curam se gesturam esse, ut observationes in perpetuum continuantur, ac vobiscum annuatim communicentur &c.* Observationes igitur ex hoc loco ad ceteras in volumine proximo accedent.

Quarta

P R A E F A T I O.

Quarta nova statio in scis nobis Spidebergae in Norvegia studio & impensis regiae scientiarum academiae, quae Hafniae viget, erecta est, uti ex literis intelligimus, quas aestumatissimus socius noster Bugge sub initium anni 1783 ad secretarium nostrum dedit. *Pastor, inquit, Spidebergensis in Norvegia, Dom. Wilse, dono societatis scientiarum Hafniensis accepit omnia instrumenta ad observationes meteorologicas necessaria, & Manheimensibus similia.* Petierat clarissimus Wilse, meteorologiae cultor notissimus, haec instrumenta olim a nobis, veluti ex tomi primi pagina 45 apparet, sed negare ea ex lege societatis ibi exposita debuimus, quamquam stationem hoc loco summo opere exoptaverimus. Haec igitur praeter spem nostram jam posita non nisi gratissima nobis esse potuit, postulatque profecto, ut curis regiae academiae meritas hic laudes & gratias publice persolvamus. Providebit forsan illustrissima haec societas, quod maxime optandum est, ut haec statio, quoad ejus fieri potest, perpetua existat.

Novae etiam stationis Cantabrigiae in Americâ spes inopinata nobis ex literis affulsit, quas cl. professor Samuel Williams ex hac urbe ad

)((

nos,

PRAEFATIO.

nos, adjunctis nonnullis observationibus, perscripsit, quemadmodum utraeque huic tomo insertae pluribus lectorem infra docebunt.

Qui instrumenta nostra in Indiam orientalem inferre, ac tuto hic loco collocare possemus, rogati a societate humanissimi focii nostri Batavi inquisiverunt, ac nobis indicarunt. Futurum itaque speramus, ut in hac quoque mundi parte observatores brevi nanciscamur.

Non ita felicem exitum aliis locis conatus nostri habuerunt. Cum Islandiam Grönländiamve ad observationes animo designavissemus, opera coetus Zinzendorffiani, seu fratrum Moravorum, qui missionarios in his terris habent, hac in re uti nos posse existimaveramus. Quare ad Fridericum Adamum Scholler, in seminario, quod illis Barbii est, celebrem professorem literas dedimus, audituri, qua potissimum ratione id, quod in votis nobis erat, consequi liceret. Respondit hic, in Islandia fratribus nondum stabilem esse sedem, qui vero in Grönländia sunt, horum alios aliis saepe succedere, rem proinde incertam esse, an hac via societatis desiderio satisfieri possit. Quae cum ita essent, desistere hoc proposito nostro debuimus.

Statio-

PRAEFATIO.

Stationes nos in Hispania ac Lusitania nascente modo societate nostra quaesivisse, ex tomi primi pagina 23 patet. Spes hic cum prima vice frustrata nos fuisset, amicorum ope periculum alterum, sed pariter inutile fecimus, incerti tamen, an hi rem serio egerint.

Observatorum nostrorum, quorum nomina tomi primi paginae 46 & 47 exhibent, mutatus nemo est praeter Peiffenbergensem, cujus in locum successit Herculanus Schwaiger, abbatiae Rotenbuchensis canonicus. Interim etiam observator Ratisbonensis, cl. Steiglehner suffectus, nobis innotuit. Est hic P. Placidus Heinrich, ordinis S. Benedicti in abbazia ad S. Emmeranum sodalis.

Quod non omnes observationes ordine alphabetico in hoc volumine, uti in primo, impressae sint, inde est, quod nonnullae sero nobis adlatae fuerint, aliae, latine non scriptae, verti satis mature propter alia negotia non potuerint.

Eos, qui pro his Ephemeridibus subscribere, monitos humanissime volumus, librariorum illos opera hac in re uti debere, societas enim nostra hanc curam in se suscipere non potest. Quare culpa immunes sumus, si eorum quidam tomum primum non acceperunt.

)()(2

Super-

PRAEFATIO.

Supereſt, ut nova ſigna vulgemus, quae ad obſervationes magis illuſtrandas amplificandasque invenimus, in hoc volumine ex parte modo uſurpata. Indicat itaque

☉ ſolſtitium boreale,

☉ ſolſtitium auſtrale,

☉^a aequinoctium ſolare aſcendens,

☉^d aequinoctium ſolare deſcendens,

☉ ortum ſolis per nubes,

☉ occaſum ſolis per nubes,

☉ ſolem, ut ajunt, trahentem aquas,

☉ ſtellam cadentem,

☉ globum igneum,

☉ lunifſtitium boreale,

☉ lunifſtitium auſtrale,

☉ aequinoctium lunae aſcendens,

☉ aequinoctium lunae deſcendens,

☉^a nubes ductas, quaſi ſcopis planatas,

☉^a nubes, quas gregarias vocant,

S, Signo = vel = additum, ſolem aut ſtellas micantes,

☉^a nubes lacteas, five eas, quae

majores in diſcos efformatae, ac

internitente coelo coeruleo di-

ſtinctae, candore lac referunt.

Ex muſaeo meteorologico nonis Aprilis MDCCCLXXXIV.

Observationes Manheimenses electricitatis atmosphaericae.

Eandem machinam, quam primo Ephemeridum nostrarum tomo descripsi, ad explorandam hanc electricitatem hic adhibui, instrumentum, quod cl. Cavallo in hunc finem invenit, anno proximo additurus, sed quo laborabat vitio, liberatum. Quae de nubium electricitate, in hanc se machinam infundente, ac de tabula eam exhibente anno superiore differui, brevitatis gratia hic praetermitto. Unicum monebo, me instrumentum, quo ad explorandas electricitatis vires aliquanto tempore usus fueram, pagina tomi primi 88 descripto, iterum missum fecisse propterea, quod, nisi quadrantes vitrei humoribus diligentissime repurgati fuerint, filum index alterutri identidem adhaerescat. Quare modum has vires definiendi, tomo primo indicatum, adhuc retinui.

Descriptio morborum dominantium

Autore cl. Mai.

Januarius.

Morbi inflammatorii — hinc inde febres scarlat. cum diarrh. bilios.

Februarius.

Febres intermittentes quartanae pertinaces — morbi inflammatorii rheumatici. Febres scarlatinae malignae infantilem aggressae sunt aetatem.

Martius.

Idem ut priore mense morbi. Vix una febris vernalis absque corticis usu profligata fuit.

Aprilis.

Plures, qui per hyemem febribus intermittens decubuere, morbis inflammatoriis corripiebantur. Facta crisi in pristinam intermittens naturam degenerabant febres inflammatoriae.

Majus.

Praeter aliquas febres intermittentes & scarlatinas steriles morborum mensis fuit Majus.

Junius

Febres intermittentes benignioris moris, tussis convulsivas, & diarrhaeas biliosi generis produxit.

Julius

Julius & Augustus

Febres intermittentes malignas summe biliosas subinde in continuas abeuntes generarunt. Immensa fuit febrium copia, funera tamen parviora. Dysenteriae hinc inde biliosae observabantur. Summa debilitas febres intermittentes subsequabatur. Debilioribus per longum tempus usus corticis peruviani fuit necessarius. Haec constans est in urbe nostra observatio; cortex peruvianus non amplius ut priore aevo febres debellat endemias intermittentes.

September & October.

Febres intermittentes biliosae vomitu & diarrhaeis spontaneis infestae hos comitabantur menses — diarrhaeae dysenteriodes hinc inde adparebant. Aegroti, qui prioribus mensibus vel sponte vel arte nimis evacuabantur, ut umbrae per strata ferpebant & nonnisi largiori corticis amarorumque usu convalere. Febres quartanae inchoabant.

November & December.

Scarlatinam infantilem variolae benignae praeter spem subsequabantur. Morbi hinc inde inflammatorii observabantur — febres quartanae copiosiores debiliores corripiebant cives. Rheumatismi inflammatorii finem anni salutarunt.

Annotationes speciales in observationes praecedentes.

Dies.

Januarius.

- 3 Mane ingens albor ad horizontem occidentalem, terminatus parte adversa secundum totam longitudinem densissima atra nube. Utriusque termini inaequaliter sese dentium instar excipiebant. Medio 10 mat. ex hac nube ventus vi = 3 spirare coepit, & paulo post in pluviam resoluta disparuit.
- 5 Totus horizon occidentalis insigni albore collustratus summo mane erat, coelo cetero spissis nubibus tecto, vento S W vi = 3 spirante.
- 8 Hora 7 mat. nigris nubibus candidae complures inferiores multis locis intermixtae. Hor. 8 mat. tractus coeli apertus seu nubibus immunis, 10 pedes oculorum judicio latus, ab horizonte 40 circiter gradibus remotus, per totum occidentem procurrebat, limbo ejus occidentali secundum totam longitudinem nube candidissima occupato.
- 9 Hoc mane multae nubes candidae, ut die 8, nigris mixtae.
- 13 Coronae candidae venerem cingentis diameter apparens 4 pedes habebat.
- 23 Notatu dignus hic dies, quod coelo nubilo, pluvio & procelloso barometrum valde altum constiterit, nec multum ex die hesterno descenderit.
- 24 Vespere nubes lacteae coelum occupabant. Candidissimi sunt coloris, in orbes majores veluti in squamas divisae, quas inter partes coeli apertae semper laete sunt caeruleae. In eas luna lucem rufam effundere solet.
- 25 Mane h. 7. triplicis generis nubes, nigrae, rubrae & albae. Nigrae infimae rapido omnes cursu ferebantur, cum rubrae intermediae & supremae albae immotae confisterent. Medio 8vae laminae nigrarum inferiores rutilum omnes colorem, paulo post flavum induerunt. Eodem tempore in oriente quaedam fasciae nubium virides apparuerunt. Medio 9vae colore nigro nubibus

E 3

omnibus

- Dies omnibus inducto ventus vi = 2.1/2 ex S W flare coepit. Versus 5 pom. in occidente aperiri coelum, barometro 4 dec. altiore. Hor. 6.1/2 coelum magnam partem apertum, laete caeruleum & stellis collostratum, sed abruptae graves illae & profunde incedentes nubes, quae atrae per diem fuerunt, lacteum jam colorem induerant, & rapidissime, vento vehementius furente, praetervolabant. Medio 10 coelo fere toto sereno ventus quiescebat, reversus h. 10 coelo nubibus albis fere toto iterum obducto.
- 26 Vespere fasciae albae in N signum aurorae borealis erant, quocum & declinatio acus consensit, Hor. 10 nubes lacteae complures.
- 27 Barometro tantopere depresso fere nihil venti tota die. Hor. 10 vesp. lacteae hinc inde nubes.
- 29 Hor. 2.1/4 pom. cum pluvia mixta nivi & grandini caderet, eae fenestras meae partes interiores denso humore, veluti frigidus hyemis tempore, inducebantur, in quas exterius guttae congelatae illapae diffuebant, manifesto indicio, pluviam & grandinem frigoris valde diversi extitisse.
- Februarius.*
- 6 Profundus mercurii in barometro descensus heri & hodie nil praeter modicam nivem nocte praecedente attulit.
- 18 Totum coelum lacteis nubibus majoribus vespere inductum.
- 25 Mirum, mane barometro alto & adhuc ascendente, coelo fere toto sereno, nulla existente nebula, hygrometrum tam fuisse depressum. Hor. 11.1/2 mat. ventus multis nubibus fulmineis comitatus vi = 3 ex W S W spirabat, barometro eo, quo mane h. 7 fuerat, loco consistente. Vespere magna acus variatio. Hor. 9 decl. 19°. 39', hor. 10 autem 19°. 18', barometro continuo ascendente. Fasciae quaedam albae in septentrione h. 9 conspiciebantur.
- Martius.*
- 7 Hor. 9 vesp. cinerea nubes praegrans, multaeque fasciae albicantes ex borea ad illam porrectae, indicium aurorae borealis praebant, qua cum re & acus magn. recessus consentire videbatur.
- 9 Procella tota nocte praecedente. Ante 7 mat. coelum hinc inde aperiri. Circa 5.1/2 vesp. procella remittit, rediit h. 9.1/2, duravitque usque ad 10.
- 12 Meridie coepit procella, durans ad h. 4.1/2 pomeridianam. Pluvia tenuis vento subinde mixta semper negative electrica fuit. Hor. 4.3/4 sol effulsi. Venti quies usque ad h. 6; tum vires resumit, ac impetu = 3 ferebatur usque ad h. 7. Mitior ad h. 8.1/2; quo tempore, atris quibusdam ac spissis nubibus coelo inducto, cetera sereno & stellifero, vi pari furere coepit, vi maiore per omnem noctem usque ad diluculum continuans, quo remittit.
- 20 Grando & nix mane notatae flante borea cecidere.
- 22 In tanta barometri profunditate ventus per diem modicus. Hor. 7 vesp. ad 11 & porro albor ingens horizontem borealem, occiduum & australem cingebat, in occidente admodum latus, angustior in borea juxta ac austro, & in hoc minus vividus.
- 27 Coelo toto quasi nebula obducto, stellis debili luce transparentibus ingens circa lunam halo, cuius area tota pura seu caerulea fuit.
- Aprilis.*
- 1 Acus magneticae declinatio h. 4 pom. erat 19°. 57', barom. 27. 2. 0, ventus = 2.1/2, coelum plurimam partem apertum.
- 7 Vespere in N W nubes cinerea praegrans, coelo caetera sereno; stellae hinc inde cadentes.
- 8 Nubes cinerea sub vespere similis hesternae in N W.

Mane

- Dies 24 Mane notatae fasciae secundum directionem venti erant compositae.
- 27 Tota fere die electricitas negativa, & vespere recessus acus magneticae insignis, altero autem mane progressus insolitus.
- Maius.*
- 1 Craffities glaciei gelu nocturno in specula meteorologica natae 2 lineas aequabat.
- 5 Declinatio magn. h. 6. mat. erat 20°. 3', hora vero 9 vesp. 18°. 57', quae differentia est 1°. 6'.
- 14 Post meridiem multae nubes crispae albae tenues, cuiusmodi & nigricantes post solis occasum in W fuere. Vespere frequentes coruscationes in W, & nocte atrox in eadem plaga tempestas.
- 15 Vespere inter horrenda fulgura, quae totum horizontem occiduum collostrabant, saepe numero columnae igneae, vividissimi splendoris, perpendiculariter telluri insistentes, magnitudinis diversae, internitebant, cuiusmodi & in Bavariae monte Peissenberg anno praecedente vidi: Electricitas nubium hodie negativa.
- 22 Vespere acus magnetica a statione meridiana 19°. 30' non recefferat. Altero mane, die scilicet 23, h. 7 mat. ad 20°. 19' progressa fuerat, eodemque postea saepius in tremorem acta continuo redibat. Paulo ante h. 8 mat. prope ad 20° recefferat, hor. 8 collucente parum sole 19°, 30' tenebat.
- 23 Acus h. 9 vesp. ultra 19° regressa erat, coelo toto veluti albo peplo tenuissimo obducto, vix ut luna & quaedam hinc inde stellae pellucent.
- 25 Coelum totum vespere albis nubibus tenuissimis, per quas stella nulla perlucebat, tectum erat. Post modicam pluviam electricam h. 10 lapsam locis aliquibus in W aperiri, at paulo post totum iterum obduci coepit.
- 30 Hora 10 vesp. grandis nubes cinerea, qualis apparere tempore aurorae borealis solet, solitaria in N W haerebat. Acus multum versus boream recefferat.
- Iunius.*
- 30 Post solis occasum ingens albor horizonti in N W incumbens.
- Iulius.*
- 25 Nubes albae & nigrae coelum vespere distinguebant, quas inter hae illis multo inferiores. Immanes in N N O coruscationes.
- Augustus.*
- 1 Stella cadens, hoc die notata, postquam apparuit, diu arsit.
- 22 Eadem nocte, qua tempestas hic saeviit, fulmen Duffeldorpii domum fabri ferrarii tetigit. Per caminum illapsum perforato laqueari in propinquum fornacis tubum ferreum infilii; diffracto sub fornace orbe fictili, laceratoque, cui hic insitebat, tabulato in conclave inferius penetravit; variis hic locis, quae metallo munita erant, damno affectis, fusaque in fenestra lamella plumbea lapidem percussit, cui cancelli fenestrales ferrei immissi erant, ab eoque in terram facto foramine se infudit. Adversum hunc casum primo conductori fulmineo, quem in palatio electorali pridie erexeram, homines timidi & ignari attribuerunt, etsi percussa domus in suburbio, palatium vero in ipsa urbe, longissimo inde tractu, sit situm.
- Decembris.*
- 16 A vespere diei praecedentis ad praesentis diei vespere mercurius in barometro magna celeritate, 7 circiter lineas & 2 decimas, ascendit, nec tamen brevi relapsus est, quod fieri alias solet.
- 17 Tota die magnus acus magneticae ad occidentem progressus.

Dies 22 Hoc die, quo hic pluvia electrica cecidit, fulmen inter cadentem nivem Viennae austriacae in turrim templi S. Stephani, aliudque eodem die in templum quoddam prope Onolzbacum, item aliud in templum S. Petri, quod Gorlitz est, incussit. Tria hoc exemplum docet, 1) fulmina fenesciente jam anno, frigidique coelo, vim suam exseruisse, 2) atmosphaeram aëris per tantos terrarum tractus eodem die materia fulminea fuisse impraegnata, 3) aedificia nostra, praesertim edita, tam diu periculo fulminum esse exposita, quam diu conductoribus carent. Sed quidam ita meticulosi, ita praeconceptionis opinionibus occupati sunt, ut aedes suas ignis coelestis vastationibus permittere malint, quam divinis his tutissimisque machinis munire.

Confectaria observationum Manheimensium Capita.

Quemadmodum haec confectaria ex praecedentibus observationibus deducere soleam, tomo primo harum Ephemeridum, qui anno superiore in lucem prodit, a pagina 127 ad paginam 141 ostendi. Quae in iis hoc anno mutavi, suo loco indicabo.

Confectaria barometrica, quae anno praeterito septem tabulis constabant, hic novem continentur, quas ecce.

Tabula I. ostendit

- 1) Altitudinem barometri toto anno maximam fuisse mense decembri postridie plenilunium, & biduo post lunae apogaeum; altitudinem minimam mense martio postridie & lunifitium boreale & primam hujus astri quadraturam. 2) Altitudinem tam maximam quam minimam notabiliter majorem hoc anno fuisse quam anno superiore.

- 3) Altitudines maximas per omnes menses, nulla plane excepta, incidisse vel ipsum aliquod punctum lunare, vel certe pridie ejus postridie; similiter omnes altitudines minimas, duabus tantum exceptis.
- 4) Altitudines maximas plerasque extitisse coelo sereno; omnes minimas, praeter unam, coelo nubilo.
- 5) Plerasque item altitudines maximas vento ex N vel O spirante, minimas plerasque vento opposito locum habuisse.
- 6) Variationem barometri mensibus hyemalibus quam aestivis multo fuisse majorem, veluti ex variationibus mediis, ad calcem tabulae positae, apparet. Hoc ipsum multo evidentius evincit

Tabula II, hoc anno nova, in qua summam omnium variationum utriusque semestrii quaesivi. Est autem summa variationum aestivarum, ut ex tabula videre licet, 393 linearum, 8 decimarum, summa variationum hyemalium 445 l. 4 d., ac proinde haec 51 l. 6 d. illa major. Exhibui porro in hac tabula

- 1) Summam variationum singulorum mensium per totum annum, unde apparet, barometrum variasse omnium maxime mense januario, omnium minime mense junio, ad quem Julius proxime accedit, veluti ad Januarium proxime Martius.
- 2) Summam variationum singulorum mensium matutinarum meridianarum, & vespertinarum, id est, horis 7 matutina, 2 pomeridiana, & 9 vespertina institutarum. Summae speciales triplicum harum variationum, calci tabulae adjectae, commonstrant, variationes matutinas & pomeridianas, aequalibus temporum spatiis (7 scilicet horis) factas, quam proxime inter se aequales numero, utrisque vero nocturnas multo minores existere. Nam si summa matutinarum pomeridianarumque, 14 intra horas factarum, est 530. 3, quid ex proportionem dabunt horae 10, inter quas (a 9 scilicet vespertina ad 7 matutinam) variationes nocturnae fiunt? Terminus quartus proportionalis erit 378. 8 loco 308. 9, quem posteriore tabula habet, inter hos duos vero numeros differentia 69. 9 intercedit.
- 3) Spatium maximum, quod barometrum singulis mensibus motu continuo, quem contrarius nullus interruptit, intra diem naturalem integrum, seu intra trium observationum excipientium se tempus, tam ascendendo quam descendendo percucurrit. Ascensus diurnus continuus maximus fuit 9 linearum, 6 decimarum, descensus maximus 8 l. 5 d. Ille in diem Martii 23, hic in diem Januarii 16 incidit, uti ex tabula apparet.
- 4) Quoties barometrum singulis mensibus matutino, pomeridiano & nocturno tempore ascenderit, quoties descenderit, steteritque immotum, quam rem curioso lectori non ingratis fore existimavi.

- 5) Variationes maximas tam positivas seu ascendentes, quam negativas, seu descendentes, in tria, quæ jam diximus, tempora singulis mensibus partitas.

Tabula III altitudines barometri medias tam pro singulis mensibus quam pro toto anno continet. Qui eas quaesiverim, tomo primo docui. Sciendum autem, me tam in hac quam in reliquis tabulis condendis & fractiones decimarum scrupulose quidem in calculo annotasse, in summis tamen, in quas demum colligebantur, dimidio majores pro integro sumfisse, reliquis neglectis. Media hujus anni altitudo 27, 9, 3 media anni superioris altitudine 27, 9, 9 sex decimis minor existit.

Tabula IV altitudines barometri medias matutinas, pomeridianas & vespertinas sistit. Eas, quae in calce tabulae posita sunt, inspicienti apparebit, minorem in universum esse barometri altitudinem sub meridiem, quam matutino & vespertino tempore, quod & tomo primo modo ostendi. Altitudinem barometri annuam 27, 9, 4, quae in hac tabula occurrit, 1 decima ab ea differre, quam tabula praecedens continet, a calculo fractionum superius indicato venit. Ceterum habita ratione caloris, qui barometro triplici observationum tempore circumfusus fuit, meridie quam mane & vespere major esse hydrargyri altitudo deberet, veluti conspicuum est ex

Tabula V, 'qua calor barometri medius matutinus, meridianus & vespertinus exhibetur.

Tabula VI, in qua tamen id discriminis videre est, auctam esse barometri altitudinem a novilunio ad plenilunium hic exclusive, ibi inclusive. Rem quodammodo restaurat, & ad aequilibrium cum anno superiore pulchre reducit

Tabula. VII. Hujus & praecedentis tabulae confectaria differre inter se posse non mirabitur is, qui modum, quo utraque condita est, consideraverit. In priore enim altitudines mediae erutae sunt ex meris observationibus phasem lunae sequentibus, in posteriore ex praecedentium ac sequentium numero pari. vid. tom. I. pag. 129.

Tabula VIII etiam id stabilit, quod anno praecedente de lunae apogaeis & perigaeis dixi, barometrum scilicet univrsim altius consistere illorum quam horum tempore.

An cetera lunae puncta, lunistitia scilicet & aequinoctia lunaria ad variationes barometricas aliquid conferant, per annorum seriem explorare constitui. Eum in finem, hoc anno primum, a me confecta est

Tabula IX, quae altitudines barometri medias pro quatuor, quae dixi, punctis lunaribus exhibet. Eas ex trium dierum observationibus deduxi, diei videlicet ipsius, in quem punctum lunare cadit, tum diei hunc praecedentis ac sequentis. Docent hic altitudines mediae, calci appositae, multo altius barometrum hoc anno stetisse in aequinoctiis lunaribus quam in lunistitiis, altiusque in aequinoctiis ascendentibus quam in descendantibus, item altius in lunistitiis borealibus quam in australibus.

Confectaria thermometrica quatuor tabulis sequentibus sisto.

Junius.	18	28, 6	18	21, 2	24, 8	3, 6

Ex Tabula I apparet,

- 1) Calores singulorum mensium ut maximos sic minimos, paucis exceptis, vel in ipsum puncti cujusdam lunaris diem, vel pridie aut postridie incidisse.
- 2) Calorem maximum mense Julio, Februario minimum, ut fieri assolet, habuisse locum, utrumque vero insignis magnitudinis, ac multo majorem, quam anno praecedente, extitisse.

3)

Tabula thermom. III.

Menfes	Calor medius.			Medius ex 3 mediis.
	matut.	merid.	vespert.	
Januar.	2, 1	4, 1	2, 4	2, 9
Februar.	-2, 8	1, 4	-1, 2	-0, 9

December.	0, 1	1, 5	0, 4	0, 7
Ex omnibus mensibus.	6, 2	9, 7	7, 4	7, 8

- 3) Variationem thermometri maximam hoc anno fuisse 39, 4.
- 4) Mensibus aestivis quam hyemalibus variationem multo fuisse majorem.
- 5) Variationem mediam pro singulis mensibus hoc quam superiore anno 8 decimis majorem extitisse; haec enim fuit 14, 1, illa 14, 9.

Tabula II docet, tempore minimorum calorum, quam maximorum, altius barometrum constitisse, veluti ex altitudinibus mediis in calce tabulae positis, videre licet.

Tabula III palam facit,

- 1) Singulis anni mensibus, excepto nullo, majorem aëris fuisse calorem hora observationis vespertina quam matutina, hoc est 9 post, quam 5 ante meridiem horis.
- 2) Julium fuisse mensem omnium maxime calidum, uti ex tabulae columna quinta elucet.
- 3) A Februario ad Julium pedetentim calorem fuisse auctum, inde usque ad anni finem diminutum.
- 4) Calorem medium hoc anno fuisse 7, 8, qui in numerum dierum anni 365 ductus summam efficit 2847, multo minorem ea, quae anno praecedente ex calore medio & eodem dierum numero producta fuit.

Tabula IV ostendit,

- 1) Calorem solarem maximum in eundem cum umbratili maximo mensem, sed uno die serius incidisse, atque differentiam inter utrumque fuisse 5, 6.
- 2) Hac autem differentia eam minorem esse, quae inter calorem medium solarem & umbratilem, ex pari numero observationum eodem tempore institutarum deductum intercedit.
- 3) Calorem solarem maximum, teste columna tertia, ab anni initio ad Julium usque continuo fuisse auctum, inde ad finem anni per singulos menses iterum diminutum.
- 4) Haec tamen incrementa caloris ac decrementa nullam inter se proportionem comparationemque habere.

Consectaria hygrometrica duae tabulae sequentes lectori ob oculos ponunt.

Tabula hygrometrica I.

Toto anno.	22	9, 9	☼	26	65, 5	☼
	Januar.			Julii.		

Ex Tabula I fit planum,

- 1) Humiditatem hoc anno maximam extitisse mense Januario, tempore nebulofo, ac notabiliter minorem quam anno superiore, cujus differentiae ratio est, quod nebula tunc, uti tomo Ephemeridum primo pag. 134 dictum est, integro triduo duraverit.
- 2) Siccitatem hujus anni maximam 65, 5 ad eam, quam anno praecedente notavimus 65, 0, quam proxime accedere.
- 3) Rationem inter coeli faciem tempore maximae & minimae humiditatis eandem fere, quae anno superiore, extitisse.

Tabula II docet,

- 1) Humiditatem matutinam per omnes menses fuisse maximam, minimam meridianam, mediam inter utramque vespertinam.
- 2) Mensem omnium maxime humidum fuisse decembrem, ad quem proxime Januarius & November accessere, quemadmodum ex tabulae columna quinta apparet.
- 3) A mense Januario ad Junium humiditatem continuo decrevisse, crevisse inde usque ad anni finem.
- 4) Hunc annum superiore notabiliter fuisse humidiores.

Consectaria observationum Pluviae & Evaporationis tribus, quae sequuntur, tabulis continentur.

Tabula I pluviae docet sequentia.

- 1) Copia pluviae maxima per totum annum cecidit die 18 Aprilis, aequavitque 11 $\frac{3}{4}$ lineas, multo minor ea, quae anno praecedente die 14 Septembris deciderat.
- 2) Dies singulorum mensium maxime pluvii, praeter quatuor, vel in ipsum puncti cujusdam lunaris diem, vel unico die prius feriusve cecidere.

Ex Tabula II pluviae videre licet,

- 1) Copiam pluviae maximam cecidisse mense Septembri, minimam Februario.
- 2) Copiam pluviae toto anno delapsae esse 21 poll. 8 $\frac{3}{4}$ l. ea minorem, quae anno superiore decedit.
- 3) Rheni incrementa ac decrementa cum quantitate pluviae mensium correspondentium haud consentire.

Tabula Evaporationis monstrat,

- 1) Copiam aquae, quae evaporavit, quam pluviae collectae multo fuisse majorem, cujus rei rationem anno superiore modo attulimus.
- 2) Evaporationi cum calore magnam esse conjunctionem.

G 2

Tab. Evaporationis.

				19, 19	19, 27	19, 21	19, 22

Elucet ex hac tabula,

- 1) Variationem acus toto anno maximam fuisse 1 gr. 37 m., adeoque 24 minutis majorem quam anno praecedente.
- 2) Declinationem meridianam tam matutina quam vespertina multo fuisse majorem non tantum toto anno in universum, sed singulis etiam mensibus, imo & singulis anni diebus, paucissimis exceptis, ut observationes perlustranti patebit.
- 3) Fuisse & declinationem vespertinam matutina majorem, non quidem per omnes plane menses, sed spectato toto anno.
- 4) Considerato acus motu menstruo illam Januario & Februario fuisse stationariam, progressam esse parum versus occidentem mense Martio, inde ad finem Julii insigniter retrogressam, processisse iterum mense Augusto, Septembri stetit, retrogressam Octobri, ab hoc vero ad anni finem magno spatio ad occidentem accessisse, quae omnia ex columna tabulae postrema plana fiunt.
- 5) Habita ratione totius anni, cum anno praecedente collati, declinationem acus fuisse auctam.

Confettaria

Confettaria observationum venti duae, quas hic subijcio, tabulae exhibent.

Summa.	28	64	210	63	133	34	13	49	22	5	17

Hanc tabulam intuenti haec fient palam,

1) Exiguum fuisse hoc anno dierum ferenorum numerum, ac minorem adhuc, quam anno praecedente, 2) menses fuisse omnino quinque, quibus nullus dies serenus internituit, 3) dies pluvios pari fere numero, nivales vero duplo plures eoque amplius fuisse, quam anno superiore, 4) auras boreales hoc quam praecedente anno fenas fuisse plures. Harum aurarum quatuor pluvia, tredecim nulla intra biduum proximum secuta fuit. En brevem descriptionem aurorarum borealium, quas cl. astronomi nostri in specula Electorali observarunt, ac nobiscum communicarunt.

Aurorae boreales anno 1782 in specula astronomica Manheimensi observatae.

- Januar. 5 Hora 10 min. 30 aurora borealis alba fine radiis comparet coelo vaporibus pleno, cessat circa mediam duodecimam.
- 9 Incipit h. 8 aurora borealis alba fine radiis coelo vapido, & postmodum omnino nubilo. Hora 9, 30 min. acus magneticae declinatio 56 min. minor inventa est, quam a meridie hora 3.
- 10 Post horam 8 magna luce regio borealis collustrata apparet, quam post horam nubes albae-electricae per coelum dispersae secutae sunt, nulla mutatione facta in declinatione acus magneticae.

Media

- 12 Media nocte conspicitur aurora borealis alba nigrae nubi valde humili infidens, cujus nubis centrum in N N W relatum est. Quadrante post mediam noctem coelum nubibus a borea allatis contegitur. Acus magnetica immota haesit.
- Martii 9 Praecedente vento per diem integrum vere procelloso, & pluvia, quae hor. 9. min. 15 vesperti incepit, & h. 11½ denuo desit, circa mediam noctem aperitur coelum, ac ex infueto lumine, quo totum collustrabatur, praesentiam lucis cujusdam borealis prodebat.
- 15 Hora 9 aurora borealis alba fine radiis 30 gradus circiter a N in W declinat, & usque h. 11 perdurat eadem. Acus magnetica ab h. 6 vespertina usque ad mediam noctem 27 min. magis ad boream accessit.
- Maji 9 Coelo sereno circa h. 9¾ in W N W observatae sunt duae nubeculae albae pertenuis in eadem fere altitudine cum stellis Castore & Polluce, quae vicissim vivaciori lumine quam luna collustrabantur, & intra duo temporis secunda lumen suum iterum amittebant, ita ut si una luceret, altera omnino disparuisse, phaenomenon simile ac in nubibus electricis vicissim & successive corruscantibus, & invicem sese illuminantibus. Hora 11 min. 30 in eadem altitudine unica nubecula comparet, mox valde collustrata, mox nullum sui vestigium relinquens. Acus magnetica nullam mutationem subiit.
- Junii 5 Circa 11 h. vesperti aurora borealis tenuis, pallida, nubi nigrae infidens & perparum a borea in occidentem declinans observatur. Acus magnetica ab h. 9 vespertina usque ad hoc tempus 10 minutis ad boream accessit.
- 13 Hora 11¾ incipit aurora borealis alba flavis columnis distincta, circiter 25 gr. a borea in occasum declinans. Semihora post mediam noctem denuo cessat. Acus declinatoria non nisi 6 minutis versus boream regressa est.
- Julii 20 Vesperti h. 10½ observatur initium aurorae borealis; cingitur corona nubecularum albarum, quarum centrum 10 gr. circiter a Nord in Ost declinat, quaeque intra horae quadrantem ex N O in S W deferuntur. Nubes nigra, ex qua columnae flavae affurgebant, 40 gr. circiter a borea in occasum declinat. Acus magnetica media nocte 35 minutis minorem declinationem habebat, quam h. 9 vespertina.
- Sept. 12 Vesperti ab h. 10 aurora borealis flavi coloris, cujus pars inferior & limbus supremus nigra nube terminabatur. Acus declinatoria ab hora 6 pomeridiana ad hoc usque tempus 1 gr. & 4 minutis ad boream rediit. Circa

- Sept. 13 Circa h. 10 in regione Urfae majoris lux magna & vivida apparet.
- 30 Circa h. 9 $\frac{1}{2}$ per nubes aurora rubro-flava sine ullis radiis apparet. Acus magnetica ab h. 6 pom. ad hoc tempus 40 minutis ad boream regressa est.
- Octob. 8 Hora 10 vesp. rumpuntur nubes & transparet lux flava adeo vivida, ut terram tanta luce collustraret, quanta luna in prima aut ultima quadratura. Acus 47 minutis ad septentrionem accessit.

In retrogradationem acus magneticae tempore aurorae borealis hic plurimis vicibus ab astronomis nostris notatam lectores velim animos intendant. Sunt enim vel clari nominis physici, qui hanc acus mutationem negent. Hanc acus mea, ex quo illa utor, ordinarie ita subit, ut praesentiam aurorae borealis, ubi nulla in mentem mihi venisset, me saepissime docuerit, qua de re pluribus in diario rhenano ante hoc biennium differui. Addam, quod saepissime notavi, declinationem sub meridiem, ubi vespere aurora borealis imminet, ordinaria communiter majorem existere. Observationes meas annuas superius communicatas perlustranti complures occurrent, ubi acus infra gradum 18, quae mutatio insignis est, retrogressa fuit, nulla aurora boreali notata; aliquam tamen praesentem fuisse, sed occultam, dubitare vix licet. Auroras boreales mutationem in acus magneticae declinationem inducere cum certo teneamus, suspicio tentat animum, an non ea ipsa materies, quae auroras istas gignit, etiam hujus declinationis causa perpetua existat. Torrens hujus materiae in atmosphaera ac tellure semper praesentis si olim ex borea magis in orientem se diffuderit, nunc in occidentem magis vergat, si diversis cum anni tum diei temporibus varie rarefacta aut condensata, magisque aut minus ad latus aquilonis diffluat, vicissitudines declinationis magneticae, non tantum cum ex orientali in occidentalem transiit, sed & annuae & diurnae luce aliqua perfunderentur.

Consectaria electrica ex data superius tabula fluunt. Ex ea perspicimus,

- 1) Inter 82 vices, quibus electrometrum atmosphaericum ignem edidit, hunc 16ies transeuntibus nubibus tonantibus aut fulgurantibus, 66ies nubibus mutis fuisse genitum.
- 2) Ex foetis his nubibus sexaginta & unam fudisse pluviam, grandinem, nivemve.
- 3) Habita ratione vicissitudinum, quae fieri durante machinae scintillatione solent (tom. I pag. 119), ignem fulmineum 73 vicibus e terra in nubes, ex his in terram 58 tantum vicibus evibratum fuisse, ex foetis proinde, quae transiere, nubibus 15 negativas plures quam positivas extitisse.

4) Ex

4) Ex 82, quas supra diximus, vicibus nubes foetas venisse 33 vicibus ex S W, 20 ex N W, 12 ex W, 11 ex S O, 6 ex N O.

Consectaria propagationis incolarum urbis Manheimensis tribus hoc anno tabulis comprehendi. Prima per omnia similis ejus est, quam tomo primo pag. 124 inferui. Secunda per omnes anni dies numerum mortuorum sistit, adjunctis punctis lunaribus, statu coeli & venti viribus. In his autem mortuis Anabaptistae & Judaei non sunt, quia eorum catalogos justo ferius accepi. Tertia fammas exhibet eorundem mortuorum, tum ad puncta lunaria, tum ad bonos malosque dies pertinentium. Sumsi autem ex quavis horum punctorum classe duodecim, punctisque singulis, ut quovis mense occurrunt, triduum attribui. Dierum malorum nomine veniunt ii, quibus pluvia, nix, nebula spissior, ventusve vi minimum = 2 spirans fuit, quamvis hos non omnino omnes valetudini hominis rear semper nocivos; ad dies bonos spectant reliqui.

Tabula I nos docet, 1) hoc anno 43 puellas plures, quam masculos, fuisse natas, cum hi illas anno superiore numero 33 superarint; 2) Differentiam inter numerum natorum catholicorum = 452 & numerum natorum Protestantum = 248 esse 207, cum anno praeterlapso fuerit 224; 3) Catholicorum matrimonia ad matrimonia Protestantum esse in ratione 100 ad 79, anno autem superiore in ratione 72 ad 61, quae illa multo minor est; 4) Reformatos longe plura contraxisse matrimonia quam Lutheranos, cum hi quam illi 13 plura anno praecedente iniverint; 5) Summam mortuorum virorum & mulierum esse ad summam mortuorum infantum coelibumque, ut 448 ad 566; 6) differentiam inter natos = 735 & mortuos = 1014 esse 279. Liqueat ex

Tabula II, 1) plurimos fuisse mortuos mense Junio, paucissimos Februario; 2) plures e vita discessisse 6 mensibus aestivis quam hyemalibus, esseque differentiam 54 inter utrosque, qui collecti summam efficiunt 966.

In *Tabula III* initium periculi feci olim prosequendi, num morientium frequentia a punctis quibusdam lunaribus dependeat, quantumque eo conferat tempestatis vicissitudo. Ex ea videre licet, 1) plures hoc anno fuisse mortuos circa novilunia, quam circa quamvis aliam phaesem lunarem, 2) plures in apogaeis quam in perigaeis, 3) plures in lunistitiis borealibus, quam in australibus aequinoctiisque, 4) plures item tempestate adversa quam secunda, nam adscriptus diebus bonis mortuorum numerus 333 ex ratione eorum, quos dies mali sustulere 350 esse deberet.

Ephemer. anni 1782.

OBSERVATIONES HAFNIENSES

Autore Bugge (Tom. I. p. 46).

SITUS LOCI ET INSTRUMENTORUM *).

Locus observationis est observatorium regium Hafniense, erectum in fastigio turris astronomicae vel rotundae, constructae e muro solidissimo, testudinibus firmissimis, & concamerationibus continuis circa medium cylindrum ita serpentibus, ut ob modicas declivitates ad supremum usque fastigium absque scalarum gradibus commode ascendere liceat. Altitudo perpendicularis observatorii supra solum est 120 ped. Danic. vel Rhenolandicorum, & supra libellam maris consuetam 132 ped. Situm est observatorium in extremitate urbis septentrionali. Ex multis observationibus astronomicis invenio latitudinem observatorii = $55^{\circ} 41' 4''$; & longitudinem a meridiano observatorii Parisiensis versus orientem = $41^{\circ} 4'$ in tempore.

Z 3

Instru-

*) Haec descriptio excerpta est ex literis auctoris die 30 Jul. an. 1783 ad secretarium societatis datis.

Instrumenta meteorologica, quae munificentia serenissimi & celsissimi vestri Electoris & Principis possidet observatorium nostrum, nempe barometrum cum suo thermometro, hygrometrum & instrumentum declinatorium, posita sunt in camera septentrionem spectante, quae nec radiis solis, nec artificiali fornacis calore refocillatur. Fenestrae per unam alteramve horam quotidie aperiuntur, quo ad hygrometrum pateat exterioris aëris aditus.

Basis & fulcrum instrumenti declinatorii est lapis quadrangularis, 4 ped. altus, & pavimento concamerato muro & gypso affuso adstrictus. Statio instrumenti est in eodem circulo verticali infra instrumentum transtorium, aut telescopium in meridiano mobile. Hinc dioptrae instrumenti declinatorii, verum meridianum determinantes, ad signa in meridiano observatorii posita diriguntur, situsque instrumenti congruus facile examinari, & declinatio acus magneticae accurate observari potest. Omne ferrum ab acu est remotum ad distantiam 5 pedum, dumque observatur declinatio, fenestrae omnes & januae sedulo clauduntur, ne motus aëris directionem acus valde mobilis perturbet.

Ad determinandam quantitatem evaporationis utor cylindro vitreo, cujus altitudo = 10 poll. & diameter = 5 poll. Parieti vasis externo adglutinaui scalam divisam deorsum in pollices & lineas parisienses. Cylindro quotidie ad supremam usque divisionem aqua repleto, evaporationem ad quamlibet meridiem emetitur lineis parisiensibus & partibus decimis. Caeterum cylindrus positus est in camera austrum spectante, & a radiis solis collustratur per totum fere diem.

Receptaculum pluviae in hyetometro est parallelepipedum cupreum, positum supra tectum observatorii. Basis est pes quadratus parisiensis; & altitudo = 8 poll. per tubum cupreum, epistomio clausum, aqua pluvialis deducitur in observatorium, ubi mensuratur cubo metallico, continente 8 pollices cubicos parisienses. Parietes interni hujus cubi lineis parallelis eo modo sunt divisi, ut quarta pars pollicis cubici certo possit determinari. Proinde quantitatem pluviae cadentis super pedem quadratum parisiensem emensus sum pollicibus cubicis. Altitudo perpendicularis pluviae invenitur, si pollices cubici observati per 144 dividantur.

Observationes exhibent quantitatem pluviae cadentis in observatorio Hafnienfi aut in altitudine 120 pedum supra solum & pavementum urbis. Suspicio autem quantitatem pluviae deciduae minorem esse in majori, majorem vero in minori altitudine supra terram aut eandem lineam horizontalem. Quam rem ut certo definiam experimento, in horto meo erexi prorsus simile hyetometrum, cujus profunditas infra hyetometrum Observatorii est 120 pedum.

Quanti-

Quantitatem pluviae in horto meo saltem per hos duos menses, Junium scilicet & Julium, utroque modo observavi, & quantitatem pluviae in hyetometro inferiori majorem inveni. Pro mense Junio 1783 has observationes reliquis adscripsi speciminis loco, easque in posterum diligenter continuabo.

Flumen nullum per urbem nostram decurrit. Mare autem balticum per mediam urbem tranfit, eam in duas dividit partes, ac portum spatiosum, tutum & elegantem format. In medio fere portu erecta est publica perpendicularis, in qua ducta est linea juxta altitudinem aquarum maxime solitam & consuetam, quam aquam diurnam (german. *täglich wasser*) nuncupant nautae. Supra & infra hanc lineam facta est divisio in pollices danicos. Altitudinem supra aquarum consuetam libellam nominavi positivam, & signo \oplus designavi*). Infra hanc lineam est altitudo negativa, quae signo $-$ exprimitur. Spero has observationes physicis, meteorologicis & nautis, haud fore ingratas.

Adjunxi tres tabulas ex ipsis observationibus deductas. Prima continet maximam & minimam altitudinem menstruam barometri, thermometri, & hygrometri, declinationem maximam & minimam, quantitatem evaporationis & pluviae. Secunda tabula exhibet, quoties per singulos menses pluit, nixit, grandinavit &c. Tertia commonstrat, quoties ex quavis mundi plaga ventus spiravit.

OBSERVATIONES HAFNIENSES.

Horae observationis ordinariae 7 mat. 12 pom. 9. vesp.

Januarius.

ANNOTATIONES.

Februarius.

Circa dies ultimos hujus mensis in hortis nostris flosculi (primula veris dicti) conspici potuere. Ceterum per hos tres menses nihil adnotatu dignum observavi.

Morbi praedominantes erant hic loci pleuritis & febres putridae, ac catarrhi.

Martius.

Circa dies 15 & 16 hujus mensis in regionem nostram advenere alaudae. — Hoc mense inter juvenes utriusque sexus febris urticosa (vulgo die Fleck) grassabatur.

Majus.

Circa dies primos virescere coeperunt arbores. Circa dies 9 & 10 arbores protulerunt flores.

Per

Per hos 3 menses observavi vento zephyro coelum plerumque fuisse serenum, dum turbidum erat vento Apeliote. — Hoc mense subitanea apoplexia inter adultos rapiebat plures. Ad finem hujus mensis inter omnes indiscriminatim saevire coepit notissima illa febris catarrhalis (vulgo die norbische Krankheit), quae tres certe partes incolarum civitatis nostrae afficiebat, nemini tamen exitialis fuit.

Segetes nostrae hybernae breves nimium paleas parcaque grana promittunt.

Augustus.

Hordeum & avena perbreves agebant aristas, grana tamen praebebant non equidem consueta, ut aliis annis, quantitate majori tamen, ac sperabant coloni. Illorum defectum satis suplebant filigo & triticum.

Ex pisib. in quibusdam locis, si aperiuntur, prodit tenuis ac niger sex pedibus instructus scarabaeus. Eius ejusmodi pisorum, si in notabili quantitate fiat, ut quidam periti volunt, hominibus lethalis est.

Foenum autumnale rarum est. Olera, lactucae, aliaque ejusmodi ob nimis diu constantem coeli siccitatem infuetumque solis calorem grave detrimentum passa sunt.

Morbi hic loci praedominantes erant per hos tres menses febres calidae ac putridae, aut catarrhales.

September.

Frumenta hyberna (Winterfat) hisce diebus (11. 12. 13) felici ubique successu terrae mandata omnem largae & divitis segetis spem relinquunt.

Circa dies 19-20 abiere hyrundines.

October.

Circa dies 13. 14 quidam anseres sylvestres, maturae alias hyemis testes, conspecti sunt. Ad finem hujus mensis abiere alaudae.

November.

Morbi per hos tres menses praedominantes erant hecticae & febres catarrhales.

Hac in urbe per annum 1782 in parochia ad divam Virginem baptizati sunt	328
ad divum Petrum	543
Summa baptizatorum	871

Instrumenta, locus, caetera eadem, quae anno superiore 1781.

Anni tempestatumque generalis conditio fuit haec:

Hyems obscura, humida, nebulosa praeter moram, licet minus pluvia, frigida vero tantum per dimidium Februarium.

Ver valde pluvium; aestas aestuosa, atque aridissima, turbinibus ac grandinibus inusitatis vexata.

Autumnus maxime pluvius.

Tritici messis fuit plusquam mediocris; at frugum serotinarum itemque fructuum inops; Vindemia tota uberrima.

Inter morbos numerandus est *catarrhus rufficus*, ita dictus, qui ut Europae reliquae, ita Euganae regionis incolas fere omnes aggressus est, quin tamen ullus ob eum proprie periret. Nihilominus mense Augusto catarrho grassante funerum numerus (quacunque de causa) excessit medium numerum pro illo mense, sicut & numerus anni totius numerum annum medium (1290). Dubitant nostrates medici, utrum catarrhus hic fuerit contagiosus, an ab inaequalitate tempestatis communis excitatus. Notandum, Epidemiam similem regnasse anno 1728 — 29.

Observationes aestus maris

Autore Josepho Vianello, med. Doctore,

Clodiae in ora Veneta milliaribus 25 ad Austrum.

Horae sunt Italicae, mensura est Veneta, pes autem Venetus ad Parisiensem se habet ut 154. 144.

Ut cognoscatur quantitas aestus, five elationis aut depressionis aquarum, sumenda est differentia numerorum. Numeri enim adnotati capiuntur a fundo maris in loco ad observationem destinato, id vero ope trabis ad perpendicularum firmatae, ac divisae in pedes ac pollices sursum ascendendo.

Januarius.

OBSERVATIONES PEISSENBERGENSES

Autore Herculano Schwaiger.

Horae observationis ordinariae 7 mat. 2 pōm. 9 vesp.

Ad omnes observationes declinatorii a nobis societati traditas usque ad mensem Julium hujus anni debent addi 2 gradus, quia linea meridiana vera ab illa, quae lapidi incisa est, 2 gradus versus occasum declinavit.

Ex defectu ponderis gallici & ex nimia difficultate inveniendi adcuratam rationem gallicum inter & bavaricum pondus, necessitati sumus observationes evaporatorii in drachmis bavaricis adnotare. Observationes Ambrae instituuntur semper circa meridiem.

Januarius.

Observationes Electricitatis atmosphaericae Peissenbergenses.

Martius. Die 12 vespere med. 8 repente ventus validus venit, cadunt pluviae, dein nives; electrometrum atmosphaericum signa electricitatis primum positivae, dein negativae, iterum posit., iterum negat., & sic saepius alternando dedit. Ultra sex lineas eliciebatur vapor electricus.

Die 13 mane levia electricitatis indicia in electrometro observabantur; utrum autem positivae, vel negativae, non fatis poterat discerni.

Die 23 post h. 7 vesp. iterum vehementior instabat ventus, & levia electricitatis indicia animadverti.

Aprilis. Die 12 h. 8 vesp. repente ventus validus infilit, coepit ningere, involvimur nebula; in electrometro signa electricitatis primum positivae, dein negativae observantur. Vapor electricus ad 3 lineas eliciebatur. Quamprimum nebula nostram regionem occupavit, electricitas ex positiva in negativam transiit.

Die 16 h. 6 vesp. tota orientalis regio nube nigra tegitur; videntur fulgura, nulla tamen tora die in electrometro electricitatis signa animadverti poterant.

Die 22 medio 3 pomerid. observabantur signa negativae electricitatis. Vapor electricus ad distantiam duarum linearum prorupit.

Die 28 hora 6 vesp. vento ex Borea veniente observabantur indicia electricitatis primum posit., dein negativae. Non ultra lineam fluidum electricum elici poterat.

Majus. Die 16 mane h. 7 cernebantur signa electricitatis negativae per integram horam continuata. Vapor electricus ad tres ferme lineas eliciebatur. Hora 5 vesp. largifima

fima cadente pluvia ad breve tempus involvimur nebula, & signa electricitatis positivae animadvertimus. Vapor electr. non nisi in distantia unius lineae elici poterat.

Die 31 hora 5 vesp. ex Borozephyro aliquot cernuntur fulgura conjuncta tonitru. Quadrante post 5 primum signa electricitatis negativae in electrometro animadvertimus, quae per integram horam continuo eadem durarunt. Non ultra tres lineas vapor electr. elicitus est.

Junius. Die 3 medio 5 pom. motu celerrimo nubes cinerea spissae advolvuntur, animadvertimus etiam eodem tempore in electrometro signa primum positivae, dein negativae electricitatis, per spatium unius ferme quadrantis continuatae. Vapor electricus ultra tres lineas profiliit.

Die 8 h. 5 pom. observamus modica signa electricitatis continuo negativae. Vapor electr. ad distantiam unius ferme lineae eliciebatur.

Die 13 tertio quadrante ad 1 oritur ex Circio ventus validus, nubes cinerea ex Zephyro motu rapidissimo advolvitur; cadunt pluviae, involvimur nebula, nulla tamen fulgura, neque tonitrua ex hac nube animadvertimus. Ex Phoenixe vero aliquoties tonat. Electrometrum signa modica electricitatis primum iteratis vicibus negativae, ac dein adveniente nebula continuo positivae edidit.

Die 22 med. 9 ex plaga orientali conspiciamus corruscationes audimusque tonitrua. Observamus in electrometro primum electricitatem positivam, ita, ut vapor electricus ultra tres lineas profiliret, dein negat., quae tamen vaporem tantum ad distantiam unius lineae exhibuit.

Die 28 medio 8 vespere validissimo Zephyro nubes ad nos agitatur, largius pluit, aliquoties tonat, densiore nebula involvimur; in electrometro primum positivam, dein negativam electricitatem advertimus per integram horam continuatam; vapor autem ad distantiam unius tantum lineae profiliit.

Julius. Die 2 circa h. 1 pom. ex Euro nubes cinerea nigra spissa exsurgit, quae sensim ad nos usque protenditur, animadvertimus ex ea frequentiores fulgurationes ac tonitrua. Circa med. 3 electrometrum electricitatem ut plurimum negativam per spatium unius horae constantem, exhibuit, vapor electricus in distantia duarum linearum elici potuit. Hora 7 vespertina ex Borozephyro validiore vento nubes cinerea lutea spissa ad nos agitatur, audimus ex illa repetitum tonitru fulguribus conjunctum; in electrometro iterum primum positivae, dein negativae electricitatis phaenomena adparere. Vapor autem tantum in distantia unius lineae profiliit.

Die 5 circa med. 4 pom. ex Zephyro nubes cinerea spissa advolvitur, paulo post largius pluit, cadunt grandines exiguae, nebulae densiores ad ortum agitantur, & in electro-

electrometro per spatium quadrantis observamus negativam electricitatem, vapor autem vix ad distantiam unius lineae erupit.

Die 8 circa med 2 pomerid. animadvertimus in electrometro positivam electricitatem, per spatium unius ferme quadrantis continuatam; fluidum electricum ultra distantiam unius lineae prorupit.

Die 14 post h. 9 vesp. in Limbo Horizontis ex diversis plagis iteratae corruscationes. Electrometrum modicissimam exhibuit electricitatem.

Die 16 circa hor. 9 vesp. dum supra verticem nostrum a Zephyro validissimo nubes cinerea spissa ad ortum propellitur, electrometrum primum positiv., deinde negativam, denique iterum negativam electricitatem exhibuit. Vapor in distantia unius lineae eliciebatur.

Die 17 quadrante post 9 antemerid. subito ex Zephyro advolvitur nubes lutea spissa; Electrometrum iteratis vicibus nunc positivae, nunc negativae electricitatis signa dedit. Ad 3 lineas vapor electricus profiliit. Post horae quadrantem phaenomenon cum nube transiit.

Die 27 hora 1 pom. audimus aliquot tonitrua fulguribus conjuncta, & in electrometro adparent signa electric. ut plurimum negativae. Electrometrum ab hora prima ad mediam usque noctem ferme continuae electricitatis signa, potissimum negativae, tam fortia edidit, ut vapor ad distantiam 9 linearum profilierit.

Die 28 mane hora 8 audimus aliquot tonitrua, atque modicam electricitatem observamus.

August. Die 4 vespere, tertio quadrante ad 9, Borozephyrus invalescit, largius pluit, fulgura & tonitrua ex omni plaga validissima frequentissimaque. In electrometro electricitas potissimum negativa exhibetur. Vapor ad distantiam 3 linearum prorupit.

Septemb. Die 17 circa 3 quadr. ad 4tam pom. observamus in electrometro positivam electricitatem, vapor vix ad distantiam unius lineae prorupit.

Die 19 ab hora 3 pom. usque mediam noctem pluviis interruptim largius cadentibus in electrometro ut plurimum negativa electricitas exhibetur. Vapor in maxima distantia ferme ad duas lineas profiliit.

Die 20 circa mediam 8 antemerid. a Zephyro validissimo nubes cin. sp. ad ortum agitatur, animadvertimus etiam, cum ex hac nube nives & pluviae mixtim deciderent, negativam electricitatem; vapor electr. ad distantiam unius lineae elici potuit.

Observationes botanicae Peiffenbergenses.

Martius. Die 2 Graculos ex occidente redeuntes confeximus.

Aprilis. Die 9 feminatur avena. — 25 feminatur filigo aestivalis. — 30 feminatur cyclamina.

Majus. Die 4 feminatur hordeum, triticum & linum. — 11 Cerasi florescunt. — 16 Piri, prunique damascenae florescunt. — 22 Siligo hic spicas agit. Mali florescunt. — 29 Piri, prunique damascenae flores dimittunt.

Junius. Die 1 inseruntur plantae oleris. — 2 Mali flores dimittunt. — Siligo hyemalis florescit. — Sambuci florescunt. — 19 Spelta & filigo aestivalis spicas agunt. Linum florescit. — 24. Spelta florescit. — 29 Siligo aestivalis florescit. — Hordeum & avena spicas agunt.

Julius. Die 1 triticum spicas agit. — 4 Cerafa maturescunt. — 7 hordeum florescit. — Triticum florescit. — 27 Linum extrahitur. — 30 Seminatur rapae.

August. Die 6 Messis filiginis hyemalis & speltae. — 13 Messis avenae. — Maturescit Sambucus. — Messis hordei & filiginis aestivalis. — 26 Messis tritici.

Septemb. Die 5 fecatur foenum secundum. — 16 Maturescunt pira. — 21 Maturescunt poma, prunaque damascena. — 23 Seminatur filigo hyemalis. — 24 Seminatur Spelta hyemalis.

Diebus 14. 15 & 16 hujus mensis hirundines turmatim supra aedificium nostrum conveniunt; denique die 16 tempore pomeridiano ad occasum avolant.

October. Die 14 effodiuntur cyclamina. — 18 effodiuntur rapae. — 23 Messis oleris.

Novemb. Die 8 graculi ad occasum avolant.

De fertilitate regionis circa montem positae.

Siccitas per tres ferme menses Junium, Julium & Augustum continua, haud exiguum fertilitati causavit damnum.

Messis tritici *media*. — Messis filiginis hyemalis & aestivalis *media*. Messis hordei *media*. Messis avenae vix non *tenuissima*, Messis speltae *uberior*. Adscribunt hanc ubertatem coloni nostri exsiccatae terrae, quia id genus frumenti solum aridum requirit. Linum ex omni parte adeo tenue, ut *tenuius* omnem hominum memoriam excedat. Messis foeni primi *media*, secundi *tenuissima*. In omni genere frumenti culmi erant brevissimi.

Fructus ex malis pirisque *medii*. Fructus ex cerasis duracinis acidulisque *ferme nullus*. Fructus ex cerasis prunisque damascenis *uberissimi*, ast simul *exigui*. Fructus raparum, cyclaminum & oleris *medii*. Pruina in Septembri pascua adeo decoxit, ut mons, alias pascuis inserviens,

serviens, rupi adsimilari potuerit. Ob tempestatem faventem semen frumenti hyemalis citius terrae mandari potuit. In vicino oppido Schoengau lues jam per 4 menses in pecus grassatur.

OBSERVATIONES PRAGENSES

Autore Strnad.

Horae observationis ordinariae 7 mat. 2 pom. 9 vesp.

Januarius.

Observationes botanicae Pragenses.

Aprilis. Die 12 folia sambuci prodire; Pyrus & cerasus, uti & persicum nihil indicii dabant.

Sambucus tamen oculos seu gemmas notabiles dabat.

Die 14. Vespertiliones secundo prodire h. 6.

Die 15. primum hirundines visae.

Majus. Circa medium hujus mensis catarrhus invalescebat cum rheumate & artuum dolore ubique.

Julius. Die 7. hinc inde messis filiginis.

OBSERVATIONES ROMANAE

Autore Abbate Calandrelli,

Matheseos in Collegio Romano Professore.

De instrumentorum meteorologicorum Situ.

Instrumenta transmissa diversum pro diversitate sortita sunt locum. Barometrum imprimis cum annexo thermometro in satis amplo atrio Musaei collegii Romani collocatum est, quod per cancellos cum vasto ambulacro longitudinis pedum 346 communicat, atque summa cum diligentia observata sunt ea omnia, quae in monito ad observatores praescribuntur. Altitudo barometri supra telluris superficiem est ped. paris. 55; atque cum ab ipsa telluris superficie supremum collegii romani solarium distet ped. paris. 86, & ex institutis observationibus Tholus D. Petri supra solarium exurgat ped. 146; cum ex observationibus a cl. Boscovichio & Maire in mensura gradus Pontif. Dit. altitudo Tholi supra maris libellam sit ped. 366, erit altitudo barometri supra libellam maris ped. 89. In superiori camera ipsius Musaei, in qua exactissima adest linea meridiana a Boscovichio & Condaminio pluries adhibita, collocata est acus declinatoria, cui summa mobilitas restituta est, quae quidem non ex amisso magnetismo, sed ex attritu capitelli & stili minime gaudebat. Instrumentum supra basin firmissimam ante fenestram, quae meridiem respicit, & in qua metallica supellectiles ferreis sunt substitutae, collocatum est in plano meridiano. Basi marmorea instrumenti firmiter agglutinata, ablato crystallo & acu, filum subtilissimum supra thecam ligneam extensum est, ita, ut per verticem stili transfret, & in plano lineae in fundo thecae ductae esset. Centro solis deinde transiente per lineam meridianam, opus fuit thecam per 9 minuta prima versus occidentem promoveri, ut stili umbra coincideret cum linea meridiana thecae. Correctio ista 9 minutorum semper adhibetur in observationibus, in quibus lentis ope collocatae supra speculum & thecam observatur coincidentia acus cum linea ducta supra crystalum.

Extra fenestram alterius conclavis Boream respicientis, & quam radii directi solis nunquam illustrant, duae lignae columnae erectae sunt, ex quarum una thermometer, ex altera hygrometerum pendet. Facies instrumentorum internum conclavis respiciunt, ne a radiis reflexis illustrentur, atque ipso tempore a pluvia defendantur. Ut autem aer circa instrumenta fluere, ac refluere possit, non modo in perfecto contactu columnarum non sunt, at etiam nocte ac die late patet fenestra, cujus latitudo ped. $2\frac{1}{2}$, altitudo ped. $5\frac{1}{2}$, distantia a superficie telluris ped. 70, atque horizon ab aedificiis circum positus, quantum sufficit, liber.

In supremo solarium, cujus altitudo a superficie telluris jam definita est, Hyetometerum & vas evaporatorium collocatum est. Circa primum instrumentum sufficiat tantum addungere, quod aqua, quae in area quadrata ped. paris. excipitur, mensuratur pro data quantitate, vel cubo 3 pollicum, vel 2, vel unius pollicis, atque ita sensibiles evadunt partes 144 lineae, quarum partium cubus pollicis continet duodecim. Schemate transmissio (Fig. I.) repraesentatur vas evaporatorium. Ope cochleae x c brachium metallicum h f g elevari, ac deprimi potest, atque ita simul elevatur vel deprimatur metallica linea, cui adhaeret cuspis y, & quae intra duas alias fixas lineas metallicas excurrit. In linea fixa signatae sunt lineae paris., atque ita, dum excurrit mobilis linea, observari possunt lineae & decimae partes lineae, cum decem partes aequales lineae mobilis respondeant undecim partibus lineae fixae. At cum peripheria a b divisa sit in partes aequales 16 & index i, qui cochleae adhaeret, debeat percurrere istarum partium 46, ut linea mobilis lineam paris. percurrat, hinc ope indicis i sensibiles sunt partes 46tae lineae parisinae, quemadmodum mense Januario & Febuario, ope alterius cochleae, sensibiles fuerunt partes 50mae lineae paris. Vas E F I G est cubus 3 pollicum; atque cum cuspis y sit in centro omnium possibilibus axium oscillationum fluidi, sive vas ex una parte deprimatur vel elevetur, semper constans erit distantia fluidi a cuspide. Affusa aqua, ita tamen, ut a margine lineas 6 distet, ne venti vis valeat ipsam expellere, deprimatur cuspis y usque dum aquae superficiem vix tangat, quod quidem ope inversae imaginis cuspidis in aqua efformatae maxima praecisione praestari potest. Post 24 horas iterum deprimatur cuspis usque ad contactum fluidi, & ita diurna determinatur evaporatio. Vas E I G F intra aliud majus A B C D continetur, atque aestivo tempore vacuum spatium aqua repletur, ne externa vasis E I G F superficies incalascet, & ita augeat evaporationem, hyemali autem acetum affunditur, ut congelatio aquae impediatur, & ita congelationis ipso tempore determinari possit aquae evaporatio. Supra trabem firmissimam firmatum est instrumentum, atque id, quod ipsum defendit a pluvia, defendit quoque ab impactu immediato radiorum solarium. Verum cum in tanta altitudine undequaque latissime pateat Horizon, solarium ipsum supremum sive hyemali, sive aestivo tempore a radiis solaribus ab ortu usque ad solis occasum continuo illustratur.

In altitudine ped. 18 a solarium bracteae duae ferreae collocatae sunt, quarum una mobilissima horizontalem, altera ex industria minus mobilis verticalem efformat Anemoscopium, in quorum uno & altero ipsis nominibus venti exprimuntur, ac in transmissio monito. Cum anemoscopio horizontali jungam quoque anemometerum a me excogitatum, ejusque constructionem quantocius mittam. Ad determinandas Tyberis depressiones atque intumescantias Ripeculae portum elegi, non multum a romano collegio distitum. Nunquam Tyberis perpendicularem parietem portus relinquit; quin etiam ut plurimum manet infra supremam superficiem parietis ipsius. Intumescendo parietem superat, atque per plana inclinata, gra-

usque marmoreos, cuncta parifino pede menfurata, ascendit usque ad publicam viam, quamvis id quidem rarissime. A suprema superficie parietis usque ad fundum diversis in locis capta menfura ped. 8 pol. 9 numerantur. A suprema superficie parietis media stabilita altitudo est ped. $3\frac{1}{2}$ adeoque in media altitudine suprema Tyberis superficies a fundo distat ped. 5 pol. 3. Quando itaque flumen est infra parietem portus, demisso plumbo exploratur ejus altitudo a suprema superficie parietis, atque inde deducitur altitudo, vel depressio supra mediam altitudinem. Tandem, quando gradus ascendit, mensurae jam captae adhibentur, atque inde altitudo supra mediam determinatur.

OBSERVATIONES ROMANAE

Horae observationis ordinariae 7 mat. 2 pom. 9 vesp.

Tyberis observatur circa meridiem. In columna Meteor. Signum + indicat *insensibilis*.

Januarius.

Observa-

Observationes Botanicae, & propagationis incolarum urbis Romae, cum descriptione morborum.

Januar. Die 2 Amygdali a Borea parum defensae jam florent.

Die prima mensis mulieres infirmæ in Nosocomio S. Joannis fuerunt 104, mortuæ a prima usque ad ultimam diem 16. In Nosocomio S. Spiritus viri infirmi fuerunt prima die mensis 323, mortui 125. Mensis hujus morbi fuerunt febres intermittentes, atque pectoris morbi inflammatorii.

Februar. Die 8 vinearum & arborum omnium gemmae turgidae sunt.

Die 23 Sambucus jam prima habet folia.

Die 24 Assyriae Mali a congelationibus maximum accipiunt damnum, nec illae excipiuntur, quae in hortis magnatum pallio aliquo sunt tectae. Omnes fere exsiccatae manent. Aliquod etiam damnum accipiunt Amygdalus persica, & Malus armeniaca.

Die 28 Amygdalus persica & Rosa tenerrima proferunt folia.

Prima die mensis mulieres infirmæ in Nosocomio S. Joannis fuerunt 105, mortuæ a prima usque ad ultimam diem 21, in Nosocomio S. Spiritus viri infirmi fuerunt prima die mensis 389, mortui 102. Usque ad 15 mensis morbi ejusdem characteris fuerunt ac praeteriti, verum postea intensitate frigoris frequentiores fuerunt anginae & pulmoniae, atque omnes fere febricitantes vel tussi, vel rauedine laborarunt. Admiratione autem dignum est, quod multae Pleuritides typum febrium periodicarum sumserint, atque cortici peruviano obtemperaverint.

Martius. Die 1 Pyrus, morus, ulmus, corylus, populus, gemmas excoriatis habent. Vitis autem gemmae turgidae tantum sunt. Viola & hyacinthus jam florere, avesque nidificant.

Die 9 floret Laurus, & prata cuncta rident.

Die 25 Vitis gemmae germinant.

Die 26 redeunt hyrundines.

In Agro Romano, cujus extensio inter quadraginta & quinquaginta ab urbe lapides, plurimae olivarum arbores a congelationibus praeteriti mensis folia amittunt; non constat adhuc, utrum penitus sint exsiccatae. In agro Romano ex ipsis congelationibus maxima animalium, & praesertim ovium, mortalitas provenit; cum nocturno tempore sub dio degant. Facto computo numerus animalium mortuorum ascendit ad 102000. Die prima mensis mulieres infirmæ in Nosocomio S. Joannis 119, mortuæ 21. In Nosocomio S. Spiritus viri infirmi 387, mortui 84. Febres intermittentes, & pectoris morbi, praedominantes mensis morbi fuere.

Ephemer. anni 1782.

Tt

Aprilis.

Aprilis. In Nosocomio S. Joannis mulieres infirmæ prima die mensis fuerunt 115, mortuæ 28. In Nosocomio S. Spiritus viri infirmi prima die fuerunt 280, mortui 65. Morbi currentes fuerunt febres intermittentes, nonnullæ morbillosæ, atque paucissimi pectoris morbi.

Majus. Die 15 Assyriæ mali florescunt, & quæ a congelationibus erant exsiccatæ, prima jam recuperant folia.

In Nosocomio S. Joannis mulieres infirmæ prima die mensis 120, decursu mensis mortuæ 38. In Nosocomio S. Spiritus viri infirmi prima die fuerunt 210, mortui 79. Morbi observati fuerunt putridæ aliquæ verminosæ, aliqua perniciofa accessio, atque minus frequentes morbi pectoris, & morbillosæ, quæ tamen in adultis pessimæ indolis fuerunt.

Junius. Die 15 in agro Romano messis jam incepit.

In Nosocomio S. Spiritus viri infirmi prima die mensis fuerunt 245, ultima die 181, mortui 72. In Nosocomio S. Joannis mulieres infirmæ prima die fuerunt 122, ultima die 110, mortuæ 20. Mensis decursu observatæ sunt morbillosæ aliquæ, putridæ atque tertianæ febres.

Julius. In agro Romano generaliter loquendo messis fuit inter 8 & 9 modios pro quolibet

In Nosocomio S. Spiritus viri infirmi prima die mensis fuerunt 181, ultima die 444, mortui 69. In Nosocomio S. Joannis mulieres infirmæ prima die mensis 114, ultima die 144, mortuæ 35. Morbi fuerunt putridæ & perniciosæ, at communiter tertianæ duplæ.

August. In Nosocomio S. Spiritus viri infirmi prima die 444, ultima die 853, mortui 91. In Nosocomio S. Joannis mulieres infirmæ prima die 142, ultima die 208, mortuæ 30. Decursu mensis observatæ sunt febres aliquæ intermittentes, simpliciter, aliquæ perniciosæ. Post decimam mensis Pituita vulgo dicta Russica se manifestat, cujusque symptomata communissima dolor capitis, vel gulæ, vel pectoris, atque duæ vel tres febres, a copiosissimo ut plurimum sudore concomitatæ. Adeo fuit morbus epidemicus, ut plusquam duæ tertiæ partes urbis ipso laboraverint. Verum una vel altera sanguinis emissionem, atque potionibus præsertim nitratis, felicissime curantur infirmi, qui post tertiam vel quartam diem convalescunt. Dicam vero, quod in me ipso sum expertus. Singulis annis pituita æstiva laboravi; hoc autem anno continuis potionibus nitratis a tussi epidemica incolumis sum factus.

September. Die 25 jam recesserunt hyrundines.

In Nosocomio S. Spiritus viri infirmi prima die 853, ultima die 506, mortui 199. In Nosocomio S. Joannis mulieres infirmæ prima die 210, ultima die 146, mortuæ 48.

Hoc

Hoc ipso etiam mense pituita mensis præteriti regnavit, quæ quidem neglecta degeneravit in inflammatorios pectoris morbos. Observatæ insuper sunt tertianæ simplices atque duplæ, quæ communiter peruviano cortici obtemperarunt.

October. In Nosocomio S. Spiritus viri infirmi prima mensis die 506, ultima 458, mortui 115. In Nosocomio S. Joannis mulieres infirmæ prima die 149, ultima 121, mortuæ 34. Scorbutus, dysenteria, querqueræ recidivæ febres æstivo jam tempore contractæ, atque paucae quædam numero pleuritides regnarunt hoc mense.

November. Prima die mensis viri infirmi in Nosocomio S. Spiritus fuerunt 458, ultima die 421, mortui 137. In Nosocomio S. Joannis mulieres infirmæ prima die mensis 120, ultima die 112, mortuæ 36. Hoc mense multæ recidivæ febres, quæ æstivo tempore contractæ fuerunt, sunt observatæ, & quæ quidem parum hoc mense chinæ obtemperarunt. Diarrhæa insuper, ac præsertim scorbutus invaluit.

December. In Nosocomio S. Spiritus viri infirmi prima die 421, ultima die 433, mortui 122. In Nosocomio S. Joannis mulieres infirmæ prima die 119, ultima 102, mortuæ 33. Præteriti mensis hoc mense regnarunt morbi; at insuper plurimæ putridæ.

Romæ a Paschate 1781 ad Pascha 1782 mortui fuerunt 6334, nati 5132. Item circa Pascha 1782 viventes fuerunt 163805, & quidem viri 89512, mulieres 73293.

^{*)} Calculus hic obscurus vel erroneus. Edit.

OBSERVATIONES RUPELLENSES

Autore Seignette,

Academiæ Reg. scientiarum Secret. perpetuo.

Rupella in littore occiduo maris atlantici sita solum versus mare leviter declive occupat. Vix supereminet mari, unde fit, ut in magnis aestibus, in portu urbi intermedio, mare super aliquot littoris partes leviter ascendat. Campi ambientes usque ad multas leucas aequæ plani ac aperti, cum nulli montes, nulla jugera, ac paucae, humiles & ab urbe remotæ silvæ solo promineant. Alti montes longissime remoti. Nullus amnis nisi 4 aut 5 leucis distans, sed multæ aquæ magnam provinciae partem olim occupantes nunc per canales manufactos ad flumina vel ad mare deducuntur.

Observationes instrumentis ab Academia Electorali Manheimensi missis factæ sunt, excepto barometro. Illud, quod miserat academia, læsum in itinere est, & tantum versus

anni

Tt 2

anni finem aliud Manheimense observationibus inservire potuit. Interea aliud barometrum observatum est, cujus differentiis cum Manheimensi, postea per plures menses sedulo comparatis, tabulae subsequentes instructae fuerunt. Gradus, quos eodem tempore exhibuerit Manheimense barometrum, sat certo exhibent.

Horis 7 mat. 2 & 9 pom. assidue factae fuerunt observationes, exceptis his, quae aquam deciduam spectant. Illae semel tantum in die hora 7 mat. fieri solent, ultima vero quaque die mensis etiam hora 9 pom. observatur udometrum. Mensura aquae deciduae fit per lineas & octavas lineae partes.

OBSERVATIONES RUPELLENSES.

Horae observationis ordinariae 7 mat. 2 pom. 9 vesp.

Januarius.

Annotatio in Septembrem.

Die 8 paulo post solis occasum, coelo ex omni parte sereno, & absque nubibus, vento a parte NO leviter flante, jam aliquot radiantibus stellis, visum est lumen repentinum in parte coeli SO. Speciem columnae igneae per brevissimum tempus praebuit meteorum illud; deinde secundum venti directionem ad horizontem vergens, per partem infimam divisa est columna, & quasi stellae ex ea eruperunt. At pars illa columnae inferior ex tempore in semetipsam revoluta sphaerae formam sumisit. Sphaera immota 25 gradibus supra horizontem elata; lumen paulo minus quam lunae, sed volumen paulo majus; pars vero columnae superior de momento in momentum ad lineam redacta est, & pars illa lineae, quae magis a globo distabat, in omnes sensus, & sat velociter, instar caudae serpentis moveri videbatur per 10 circiter minuta. Sic se res habuit, tandem gradatim ad nihilum redactum evanuit meteorum.

OBSERVATIONES SAGANENSES

Autore P. r. e. u. s.

Annotationes ad observationes meteorologicas anni 1782.

Hora observationis in tabulis meteorologicis cujusque mensis plerumque exacte notata est; cum tamen omnia uno eodemque momento observari nequeant, pro varietate circumstantiarum etiam in tabulis hujus anni quaedam sub tali hora notata sunt, qua re ipsa observata non fuerunt; notabilia sunt, quae sequuntur.

Barometrum fere quotidie mane circa horam 6^{am} & altera vice circa hor. 7^{am} mat. observatum est, etiam in aestate, ubi maturior hora observationis in tabulis occurrit, & quando nulla vel exigua (ex gr. unius decimae) differentia inter utramque observationem occurrebat, observatio prima, id est hor. 6^{ta} facta, una cum observatione Thermometri ad Barometrum suspensi contemporanea in tabulam relata est. Meridie & vesperi observatio Barometri hora in tabulis notata descripta est, praeterquam in aestate, ubi Barom. circa hor. 2 pom. fere semper observatum est, ut intervalla ab una ad alteram observationem Barometri toto fere anno aequalia servarentur.

Thermometrum libero aëri expositum, ut aliis annis hic loci consuetum, etiam hoc anno observatum est. Hora in tabulis notata fere semper ipsissima est, qua hoc Thermometrum simul observatum est. Si notabilis differentia occurrit, in annotationibus die, quo contigit, notatur; uti etiam dies unus alterve, quibus pro rectificatione observationis Thermometri plura Thermometra observata sunt, id saepius quidem factum, ad vitandam prolixitatem sufficit extrema notasse.

Hygrometra Manheimense & Lamberti *) contemporanee observata sunt horis in tabulis notatis.

Pluvia, nix, grando major (Schlossen), & grando minor (Graupen), quantum fieri potuit, singulae speciatim notatae sunt; quando autem ob mixtionem imbrium aliter fieri debuit, secundum aestimationem numerus cuique assignatus est, si pluvia aut nix continuavit, pluries in fine numerus integer inventus ad cuspidem lineae conjunctionem indicantis in tabulis notatur, ut summa omnium numerorum totius anni pondus collectum indicare valeat.

Venti directio & vires mane circa ortum solis, meridie circa hor. 1 pom. & vesperi circa occasum solis notatae sunt, paucae tamen extraordinariae mutationes venti in tabulas relatae sunt in annotationibus, ad horas, quibus contigerunt. Meminisse etiam juvabit, tritonem observatorii, cujus directio in tabulis fola descripta est, notabiliter humillorem locum habere a templo non longe distanti in S O, ut aliquando fere dubium (praesertim flante leniore vento ex S O, & circa W) occurrat, an exacte directionem hic triton indicaverit, flante vehementiore vento minus dubium remanet, veram directionem indicasse.

Lunationes ex calendario communi ad horizontem Wratislaviensem computato descriptae sunt, omittis signis, in quibus luna versabatur, nam exactis ephemeridibus astronomicis anni 1782 (ut & praesentis 1783) deficientibus praecise notare haec non licebat.

Facies coeli hora in tabulis praefixa observata est, quando autem plures mutationes acciderunt, in annotationibus eae notatae sunt. Idem cum meteoris factum est. Color nubium rarius notatus est, eo quod hucusque non satis constet observatori, quousque differentiae colorum (in monito enim pag. 6 indicati colores non sat declarati videntur) se extendant, ut congruum de iis iudicium ferri potuisset.

Decl-

*) Hujus hygrometri observationes praetermissimus. Edit.

Declinatio acus magneticae, evaporatio, altitudo aquae in flumine praeterfluente, quod hoc anno per plures menses defectum notabilem aquae passum, & nunquam extraordinariam altitudinem adeptum est, haec omnino observata non sunt.

Caeterum, quae hoc anno soli nostri fuerit
ubertas, paucis describam.

Foeni erat vis ingens: gramen ob insolitos aestus tertiam
illius partem aequabat.
Tritici justus fuit modus, hordei mediocris, siliginis
admodum tenuis, eoque tenuior avenae.
Quae frumenti genera apud nos aestiva sunt: linum,
quod usus domestici, non mercimonii causa feritur,
pro soli ingenio varium, nihilque abundans.
Malus, cerasus, prunus, arboresque oppido foecundae.
Mense Julio pascua cum plana tum montosa armentis
fuerunt non nihil exitiosa, utpote bufonum, quibus abun-
dabant, veneno infecta, ut plerique autumant.
Pulvis pyrius, oleo scorpioneo mixtus remedio fuit.

OBSERVATIONES BONONIENSES

Autore Matteuci,

Astronomiae & matheos Professore.

Horae observationis ordinariae 7 mat. 2 pom. 9 vesp. (mense tamen Januario hor. 9 mat. loco 7)

Januarius.

OBSERVATIONES INGOLSTADIENSES

Autore Steiglehner.

Monitum Autoris.

Observationes meteorologicae quotidie hic Ingolstadii fiunt octo; nempe inter horam 5 & 6; item hora 7, 9, & 11 mane; post meridiem vero horis 2, 4, 6, & vespere hora 9; nonnunquam pro ratione circumstantiarum horis etiam intermediis & aliis quibusdam. Ex hisce ephemeridibus desumptae sunt observationes sequentes.

Cubiculum, in quo observatur, septentrionem respicit, at pluribus aedificiis circumstantibus ita conclusum, ut liberior aër instrumentum thermoscopicum, & hygroskopicum afflare aegre possit. Utrumque etiam instrumentum radiis solaribus saltem reflexis nonnunquam a meridie nonnihil perturbatur.

Hyetometrum, quo a die prima Junii utor, a Domino *Brander* confectum est. Quum vero divisio instrumenti paradoxa sit, brevissimam ejus descriptionem praemittendam arbitror. Vas vitreum cylindricum est, cujus diameter baseos aequat 31 lin. Viennens. Ejus altitudo divisa est ab artifice in duodecimales lineas Parisinas, vitro (ut solet) incisas. Superior hyetometri pars, qua pluvia excipitur, Pyramis est inversa, quadrilatera, cujus basis est 36 digitorum quadraticorum Viennensium. Igitur pluvia mensura excipitur Viennensi, & Parisina adnotatur. Quare reductione quadam opus. Quum enim diameter baseos cylindri vitrei sit 31 lin. Vienn. atque adeo ipsa basis 754, 8; cubus vero, cujus basis est 36 digitorum, contineat lineas 373248; consequens est, ut si hic cubus in cylindrum convertatur baseos datae, altitudo cylindri sit 495 linearum Vienn. five 481 Parisiens., hoc est, si altitudo aquae pluvialis in hyetometro Ingolstadiensi sit 481 lin., erit altitudo ejusdem aquae in cubo praedicto

6 digitorum vel 72 linearum. Unde patet, lineas aquae pluvialis a me assignatas per 6, 68, vel per 6, 7 dividendas esse, ut prodeat altitudo aquae in cubo, cujus basis est 36 digitorum quadraticorum Viennensium.

Incrementa & decrementa Danubii ad pedem & duodecimales digitos bavaricos, supra vel infra littoris marginem supremum mensurantur a scriba quodam civitatenfi ad exteriorem Danubii portam collocato. Etsi vero vir candidae prorsus mentis esse videatur, & mercede satis larga a me honoretur, tamen in observationes quasdam error irrepsisse mihi videbatur. Observationes autem illae, quae mihi minus rectae videntur, ad finem mensis Aprilis ponuntur; etenim vir bonus in suis ephemeridibus mihi traditis Aprilem per inadvertentiam dierum triginta duorum posuit, nempe post diem 19 rursus ponendo dies 18 & 19 cum variis aquarum altitudinibus. Caeterum altitudines Danubii infra littoris marginem signo *minus*, supra vero marginem signo *plus* *) notavi, initio numerandi a margine littoris sumto.

Quum anno 1783, quo haec scribo, speciali differtatione typis vulgata ostenderim, *minima* saltem *insignia* in motu baroscopico anticipari in locis occidentalibus, operaeque pretium fore existimem, ut novum hoc phaenomenon exactius ad trutinam revocetur; horas *minimorum* quorundam & *maximorum* in motu baroscopii Ingolstadiensis assignavi, quae mihi intra horam saltem certa esse videbantur. Id si eadem ratione a pluribus observatoribus magno a se intervallo distitis, & saepius per diem observare solitis fieret, phaenomeni hujus veritatem, & ventorum vires in baroscopium magis confirmaret.

Id denique monendum, hygrometri gradus a me assignatos a calore incorrectos esse; non enim arbitror, rationem illam dilatationis & condensationis, quae pro hygrometro Rezia-no circumfertur, exactam esse.

Ggg 2

OBSER-

*) Hoc signum, veluti in aliis similibus observationibus, a nobis omissum subintelligitur. Edit.

OBSERVATIONES INGOLSTADIENSES.

Horae observationis ordinariae 7 mat. 2 p.m. 9 vesp.

Supplementum ad observationes Ingolstadienses
anni 1781

Autore Steiglehner.

Observationes meteorologicae Ingolstadii a me factae initium capiunt a mense Novembri anni 1781; nec enim citius Ingolstadtum veni. Observationes vero hic loci ante adventum meum factas nec vidi, nec Manhemium missas novi, donec eas typis expressas Tom. I. perspicerem. Illis ergo haec paucas addendas existimaui, ut ne annus omnino imperfectus maneret. Observatum vero tum a me, tum ab eo, quem ex monasterio mecum accepi, focio mechanico, est in diem plerumque decies. Unde plurima maximorum & minimorum tempora a me adnotata a veris haud longe aberrare arbitror. Caeterum loca lunae addidi, ut facies observationum praemissis quodammodo conformis esset.

Excerpta ex Dissertatione:

*Atmosphaerae pressio varia observationibus baroscopicis propriis & alienis quaesita
a Coelestino Steiglehner. Ingolstadii MDCCCXXXIII.*

§. I. Mercurii descensum ascensumque in barometro, *oscillationem* baroscopii adpello. Si quis observationes baroscopicas Tom. I. Ephemerid. meteorolog. contentas diligentius perlustraverit comparaveritque; haud quaquam inficias ire poterit, oscillationes una die longiores ad plura sese loca, longitudine & latitudine geographica diversa, simul extendere. Id ipsum tamen in dissertatione praedicta ad oculum demonstratum est.

§. II. Oscillationem una die longiorem, *generalem* dico, brevior *particularem*.

Igitur & vis ad oscillationem generalem sollicitans, generalis, ad oscillationem vero particularem impellens, particularis adpellari potest.

§. III. Quum in quavis oscillatione mercurius ad gradum pervenerit *minimum*, vel *maximum*, statum illum simpliciter *minimum*, hunc vero *maximum* dico.

§. IIII. *Maxima & minima homologa* censeo, quae eadem vi in pluribus locis procreata esse videntur.

§. V.

§. V. Tempus inter *maximum & maximum*, aut *minimum inter & minimum*, oscillationis celeritatem adpello.

§. VI. Inter dies ter mille sexcentos & quinquaginta, vix tres invenio, quibus baroscopium Ratisbonense per viginti quatuor horas immotum steterit, nec aliquot decimis lineae partibus ascenderit descenderitve.

Ergo jure adfirmandum existimo: Baroscopium per viginti quatuor horas nunquam stare solere. Habet ergo motum diurnum, habet oscillationes particulares (§. II); datur ergo vis particularis.

§. VII. Est, quod moneam. Haud me latet, baroscopium in locis sublimioribus, aut etiam aequatori proximis minus sensibile esse. Nec ignoro, inveniri observationum ephemerides, quibus baroscopium stetisse per plures etiam dies observatum sit. Verum id quod postremo loco dixi, vel de altitudine baroscopii media intelligendum, vel quod observationes fortassis quotidie justo pauciores institutae, vel denique quod exiguae oscillationes stationis instar habentur. Primum vero a constantia vel caloris vel ventorum vel utriusque simul provenire potest. Caeterum fermo mihi de baroscopio ab actione caloris aut frigoris incorrecto est: fermo de baroscopio Ratisbonensi, atque adeo bavarico.

§. VIII. Inter dies bis mille septingentos sexaginta septem, quibus observationes Ratisbonenses copiosiores quotidie erant, invenio dies mille octingentos & septuaginta, quibus *maximum* oscillationis mane accidit. Restant dies octingenti nonaginta septem, quibus pomeridiano vel vespertino tempore.

Igitur duplo faltem probabilius esse judico, *maximum* mane contingere.

Tempus praeterea *maximi*, horam inter septimam & undecimam esse solet; minimi vero circa horam a meridie secundam vel tertiam.

§. VIII. Celeberrimus van Swinden Frisiae observator indefessus, sic ex observationibus suis statuit *), altitudinem mercurii hora sexta matutina minorem esse, quam decima, & ita porro de hora sexta & decima vespertina. Simile quidpiam D. Godin primus in America observavit ad aequatorem, & D. de la Condamine ibidem observasse se scribit, altitudinem baroscopii maximam semper fuisse mane circa horam nonam; minimam vero circa horam a meridie tertiam **).

§. X. Esto vis, quaecunque denique fuerit, generalis $\pm V$; particularis vero $\pm v$. Quum utraque quantitas utroque signo gaudeat; patet, quatuor casuum combinationes fieri posse. Quum vero possit esse $V=v$, vel $V>v$, vel denique $V<v$; combinationibus rursus factis,

K k k 3

duode-

*) Memoire sur les observat. meteorolog. 1779 §. 37.

**) Journal de voyage à l'équateur. Introd. hist. p. 109.

duodecim casus prodibunt. Et siquidem sit $V=v$; erunt bini pro motu & totidem pro statione baroscopii, nempe $\pm 2V$ pro motu & reliqui pro quiete, quum sit $\pm V \mp v = 0$.

§. XI. At si sit $V > v$, & ratio majoritatis sit $m:1$; erit $V=mv$, & hinc bini casus pro ascensu erunt $mv \pm v$, pro descensu autem $-mv \mp v$; & siquidem sit $\pm mv \pm v$; celeritas oscillationis major erit; minor vero, si fuerit $\pm mv \mp v$.

§. XII. Si denique fuerit $V < v$, & ratio minoritatis sit $1:m$; erit $v=mV$, & hinc pari modo bini casus pro ascensu, & totidem pro descensu eruuntur; etenim si sit $mV \pm V$ baroscopium ascendet; si vero fuerit $-mV \mp V$, descendet; & siquidem sit $\pm mV \pm V$, celeritas major erit; minor vero, si fuerit $\pm mV \mp V$.

§. XIII. Quod si ergo solae hae vires considerentur, generatim decem casus prodibunt pro motu baroscopii, & bini pro quiete. Quatuor nempe pro celeritate majore, & totidem pro minore; quibus si addideris binos casus $\pm 2V$, in quibus, ut patet, celeritatem augeri oportet, erunt generatim pro celeritate majore casus sex. Dixi: si solae hae vires considerentur; etenim accedentibus aliis viribus, alias quoque virium combinationes, alia celeritatum incrementa procreari necesse est.

§. XIII. Quum V una die longior esse soleat. §. II. & vis v quotidie positiva sit & negativa §. VIII. ponatur pro die quadam $+V$; erit, si fuerit $V=v$, illo quidem die a meridie $+V-v=0$. Unde baroscopium a meridie paululum stabit; attamen quum in hoc casu sit mane $+2V$; fieri poterit, ut aer atmosphaericus ob vim inertiae celeritatem mane adquisitam haud quaquam tam cito amittat; unde tempus stationis vel transferetur, vel accedente nova vi positiva omnino evanescet.

§. XV. Ita pariter si fuerit quocunque die $-V$, & $V=v$; mane erit $-V+v=0$. Unde baroscopium mane immotum haerebit, at vero a meridie celeritas in descensum augebitur; quum sit $-V-v=-2V$, nec quidquam adesse ponatur, quo minus descensus fieri queat.

§. XVI. Hisce principiis adhibitis cum magno saltem probabilitatis gradu problemata quaedam de motu baroscopii resolvj posse existimo. Speciminis gratia bina afferam in suos casus tributa. Ponam autem, te observare in decimis linearum partibus, ante singulas observationes tabulam baroscopii digito (ut solet) non nihil pulsare, & uti baroscopio simplici seu recto. Porro exempla ex observationibus Ratisbonae anno 1781 factis adducam; hoc enim anno societatis nostrae primo, plures existisse observatores arbitror, qui observationes, quas allaturus sum, examini subicere possint.

§. XVII. *Problem. I.* Datis mane ad observandum tribus quam proxime horis, praedicere saltem ad paucas horas motum baroscopii.

Resol. Casus I. Mane circa horam octavam, vel citius & circa decimam, vel tardius, & si placet, circa horam intermediam observa baroscopium, & siquidem tempore dato immotum stare videris, descensum praedicito.

Quum

Quum enim observationis tempore vis v positiva sit §. VIII. nec tamen effectum habeat; vim aliam adesse necesse est, qua effectus ille extinguatur; quumque aliam vim adesse haud ponamus, quam V , haecque ipsa vis alio modo quam negativo effectum positivae v suppressere non possit, consequens est, vim V esse $-V$. Quumque porro vis $\pm V$ longiori tempore durare soleat §. II. eam & a meridie adfore judicabis. A meridie autem & $-v$ esse solet §. VIII. igitur erit a meridie vel $-mv-v$, vel $-mV-V$. §. XI & XII. hoc est, baroscopium descendet.

	7.1/2	3, 3		9.1/4	2, 2		6.3/4	2, 0
	9.1/2	3, 4					8	1, 8

Casus II. Quod si vero horis ad observandum datis, baroscopium descendere videris; tum enimvero descensum ulterius generatim recte judicabis.

Quum enim horis datis v sit positiva §. VIII. descensus ab v provenire non potest. Oportet ergo ut procreetur ab $-V$; quum porro actio vis v nullum habere effectum videatur; erit $V > v$, unde erit $-mv+v$, & porro a meridie $-mv-v$ §. XI. Quidquid autem horum fuerit, baroscopium descendet.

Cafus III. Si denique horis ad observandum datis, baroscopium ascenderit, problema indeterminatum erit.

Fieri enim potest, ut sit $V > v$, & siquidem etiam fuerit $+V$; mane semper erit $mv+v$ ascensus §. XI. ut & a meridie, ubi fuerit $mv-v$. Verum eadem ratione contingere potest, ut sit $V < v$, & siquidem fuerit $-V$; erit quidem mane $mV-V$ ascensus; at vero post meridiem est $-mV-V$ descensus §. XII.

§. XVIII. *Problema II.* Datis a meridie ad observandum horis quamproxime tribus, ad paucas faltem horas praedicere motum baroscopii.

Resol. Cafus I. Ab hora prima pomeridiana aut non nihil citius, ad tertiam usque aut non nihil tardius, observa baroscopium, & siquidem stare videris immotum, ascensum expectandum pradicito.

Etenim quum tempore dato sit $-v$, §. VIII & VIII, & tamen ex hypothese sit $V - v = 0$; consequens est, ut si $-v$ transeat in $+v$, motus ad minimum fiat $= 2V$, atque adeo ascensum sequi debere patet.

Cafus III. Esto tandem, te observasse tempore dato baroscopium descendisse. Ajo, problema indeterminatum esse.

In hoc enim casu, quum semper sit $-v$, poterit esse $\pm V$. Si $-V$, & $V > v$; erit $-m v - v$. Unde transeunte etiam $-v$ in $+v$, descensus continuabitur etfi tardior. Si vero fuerit $+V$, oportet ut sit $V < v$, ut consideranti patet. Tunc vero descensus erit $= V - m V$, §. XII, & transeunte $-m V$ in $+m V$, erit ascensus $= m V + V$.

Quamvis pro casu primo rariora sint; etenim, ut monuit celeberrimus van Swinden §. VIII, mercurius ab hora 6 vespertina ascendere plerumque solet, afferam tamen pro utroque casu bina

§. XVIII. Hac ratione datis ante & post mediam noctem horis quam proxime tribus, fortassis motus baroscopii simili quadam methodo praedici & ita continuo praevidei posset. Verum quum observationes nocturnae ad id adferendum necessariae mihi desint; nihil hac de re definiendum arbitror. Caeterum in allatis exemplis notandum venit, nos diem semper numerare civilem, inchoando a media nocte. Unde patet observationes Ratisbonenses quotidie inchoari hora a media nocte prima. Nemo autem aequus rerum meteorologicarum arbiter a me requirat, ut problematum meorum resolutiones, & resolutionum rationes tanquam certas prorsus & fallere nescias vendam. Enimvero fallere nonnunquam fateor; at saepe saepius veras esse, exemplis quam plurimis ostendere possem.

§. XX. Quae haftenus a me dicta sunt, ad vestigia indaganda pertinent vis 'cujusdam generalis aequae ac particularis in atmosphaeram agentis. At vero aliud quoque pressiois atmosphaericae phaenomenon a multis retro annis mihi observatum, quum observationes proprias cum alienis loco a me remotissimis diligentius compararem. Etenim deprehendi, *minima* saltem insignia in singulis locis haud quaquam simul celebrari, sed ad occidentem citius, ad orientem tardius. Phaenomenon hoc paradoxum, quum saepius observassem, curam iniecit animo, certa, si fieri posset, veritatis vestigia inveniendi. Cupiebam igitur observationes habere *continuas, saepius per diem factas, & in locis a me remotissimis*. Verum etsi per viros auctoritate graves scribi curassem *Madritum, Ulyssiponam &c.* nullas tamen obtinere potui. Facile porro patet, me observationibus illorum, qui semel per diem observare, aut altitudines baroscopii medias assignare solent, in hoc negotio uti haud potuisse; plerumque enim non de diebus, sed de horis agendum. Etsi vero observator quotidie non nisi binas assignaverit observationes, fieri tamen potest, ut ego magno longitudinis discrimine remotus, & observationibus propriis plurimis instructus aliquo saltem modo videam, qua ratione tempora *minimorum* utriusque nostrum diversa sint.

§. XXI. Quum igitur voti mei vela contrahenda essent, observationes alias, quantum potui longitudine remotissimas inter sese & cum propriis comparavi. En tibi specimen quoddam constructione (ut solet) geometrica expressum, in qua observationes Londinenses *) cum Ratisbonensibus comparatas cernis fig. 3, quibus & Petropolitanas ex Monumentis academicis Parisinis **) adieci, ut comparatio foecundior esset. Observationum porro numeros ad mensuram Parisinam reductos videsis in tabula ad calcem posita.

§. XXII. Quodsi ergo has curvas rite mecum contemplatus fueris, forte haec mihi dabis: *minima* α , a , & A esse *homologa* §. III. & α quidem citius, a vero tardius, & ultimo tandem tempore *minimum* A contigisse. Ex hoc *minimo* α profectus ad dexteram contendo, & quamvis in B exceptio quaedam esse videatur, quum nullum ibidem adpareat vestigium *minimorum homologorum* b , & β ; tamen id non existimo obitare, quo minus ad comparisonem aliorum *minimorum* progredi liceat; etenim fieri potest, ut *minima* quaedam aut *maxima* minus insignia vi quadam particulari supprimantur. Verum curva Petropolitana, quod nimis turbulenta sit, paulisper dimissa, ad *minimum* χ progredior, & citius celebratum vides, quam homologum c . Ita de d : ita de e , si cum d & e comparaveris, invenies. Inde porro reversus ad finitimam declino, & *minimum* β' citius quam b' : χ citius quam c' : δ' citius quam d' , & tandem, si ita placet, ϵ citius quam e' celebrata esse omnia video.

§. XXIII.

§. XXIII. Quamvis observationes baroscopicae tom. I Ephemeridum societatis meteorologicae contentae nec satis longo a sese intervallo distent, nec satis frequentes quotidie sint, quae ad id genus indaginem requirantur; tamen si *minima* mense Novembri, quo frequentiora erant, in monte S. Gotthardi, Manhemii & Budae celebrata inter sese comparaveris, discrimen temporis haud contemnendum invenies. En paradigma, in quo notes velim, me significare per litteram M mane: per P pomeridie: per V vespere.

Dies.	In monte S. Gotthardi minimum accidit.	Budae idem minimum accidit.	Dies.	Manhemii minimum accidit.	Budae idem minimum accidit.
13	P.	V.	13	M.	V.
16	M.	P.	16	M.	P.
22	P.	P. +	22	P.	P. +
27	V.	die 28 P.	27	V.	die 28 P.

Quatuor ergo habes *minima certa*, & hoc mense ubique horum locorum celebrata. Unico excepto reliqua omnia ad occidentem citius, in oriente vero tardius contigere. Verum notandum, *minimum* illud, quod die 22^{da} exceptionem facere videtur, omnino nullibi horum locorum observatum esse; etenim ut ex observationibus Ratisbonensibus demonstrare possem, *minimum* illud reapse contigit media nocte inter diem 22 & 23; baroscopium enim die 22 descenderat quidem post meridiem, tum vero postquam a vespere paululum ascenderat, tandem media nocte, vel potius post mediam noctem ad ipsum statum *minimi* pervenit. Igitur exceptio illa aut ruere, aut saltem fieri ambigua videtur. Verum esto tamen! Quid inde? anne lex sine exceptione? Ipsa maris aestuum lex anne sine exceptione? Sane ne sine plurimis quidem.

§. XXIII. Liceat in hoc, ut arbitror, novo phaenomeno aleam jactare, & discrimen temporis, quantum quidem rudi Minerva, & in tanta observationum inopia fieri potest tentaminis gratia propius definire. Ad manus mihi sunt quaedam, quas ex actis Londinensibus Regiae scientiarum societatis quondam descripsi, observationes *), quum volumina aliqua ab amico illustri & in orbe litterarum celebratissimo domino de Ingenhouz haberem. Numeros huc inferere longum foret, & pagellas hasce ultra limites extenderet. Igitur ex una parte observationes baroscopicas Londinenses prae oculis habeo; ex altera vero Ratisbonenses copiosissimas, & quum observator Londinensis bis per diem observare soleat, nempe *horis Ratisbonensibus* 7 vel 8 cum minutis 43 mane: & 2^h, 43' post meridiem; eos potissimum dies selegi, quibus *minimum* quoddam certum & insigne Londini mane celebratum est, ita, ut post meridiem

Quodsi omittantur binae exorbitantes, quae contigerunt diebus 22 Martii

& 27 Septemb. erit differentia ex omnibus media - - - 3, 37

§ XXVI. Atque haec est illa meridianorum differentia, quam *meteorologicam* adpello, estque *astronomicae* omnino contraria & opposita; quod enim phaenomenon ex principiis astronomicis deductum, citius ad orientem contingere debere videtur, id in meteorologia citius ad occidentem accidit. Non me latet, differentiam, quam calculo erui, non esse ad amissim differentiae astronomicae proportionatam. Ast primum id fieri non potest, ob inopiam, ut dixi, observationum quotidie factarum. Dein pone, me in assignanda differentia meridianorum Londinensis & Ratisbonensis defectu peccasse. Et id quidem certe ponendum. Etenim illas omnes observationes omisi, quibus *minima* integro die tardius Ratisbonae quam Londini celebrata sunt. Igitur excessu haud peccavero, si pro Londino & Ratisbona statuerem differentiam 9 horarum. Porro in comparatione observationum Viennensium semper supposui, *minimum* Viennae contigisse hora Ratisbonensi 9 & min. 43, quod haud dubie citius contigerat; neque enim hora haec vespertina *minimi* tempus esse solet, §. VIII, sed citior quaedam. Igitur pro differentia meridianorum Viennensis & Ratisbonensis statui fortasse possent horae 3, & ita meteorologica ratio differentiarum esset 3 : 1, atqui haec ipsa ratio quamproxime etiam astronomica est.

§. XXVII.

*) Ephemerid. astronom. ann. 1782. Vienn. Append. p. 90 seqq.

§. XXVII. Sed quaeres, ecurr non comparaverim observationes Petropolitanas cum meis? etenim observator imperialis Petropoli horas *minimorum* & *maximorum* observare & adnotare solet. Respondeo I. Monumenta Petropolitana tardius ad manus meas venisse. II. Baroscopium Petropolitanum, ob nimiam loci latitudinem, turbulentius esse, quam oportet. Hem! quanti turbines in curva Petropolitana a D' usque ad B'! difficulter ergo *minima* homologa semper invenies. Cuperem in hac comparatione habere observationes nec nimis ad boream, nec nimis ad austrum declinantes; illae enim justo turbulentiores, hae vero tranquilliores sunt.

§. XXVIII. Ecquid autem *minima*? cur non potius *maxima* comparavi? Ast enimvero *maxima* non semper mihi distincta adparent. Aut dic fodes! ubinam *maximum* in G & F curvae Petropolitanae? Forte tamen alia occasione & in *maxima* diligentius inquiram; nam & haec mihi de progressione quadam suspecta sunt.

§. XXVIII. Sed ais: Observator Viennensis *minima* vespertina, quae intra horam 5 & 7 contingere solent, non observavit. Esto, eum non observasse horis praedictis. Ergone singula *minima* horis illis celebrantur? ergone lex haec nullis exceptionibus obnoxia §. VIII. Sic ergo habe: Dies, quos potissimum selegi, ii sunt, quibus baroscopium Viennense intra horam 9 & 10 vespertinam *descendendo* profundius stetit, quam horis praecedentibus adsignatis: Ratisbonense vero altius & quidem *ascendendo* & a statu *minimi* praecedentis *furgendo*. Igitur certum erat, *minimum* Ratisbonense ante horam 9 vel 10: Viennense autem circa hasce horas contigisse.

§. XXX. Scrupulum adhuc movere possunt annuae observationum comparationes a viris gravissimae autoritatis typis edi solitae; etenim sine ullo longitudinis locorum discrimine *maxima* aequae ac *minima* celebrata esse videntur. At memineris, *minima* quaedam esse *repetita*, ut *minimum a* in curva Ratisbonensi (fig. 3): alia *impedita*, ut B in curva Petropolitana: alia *violenta* aut *excessiva*, ut in eadem curva D', vel H vel C'. I nunc & quaere ex observatore Petropolitano, quo die Petropoli celebratum sit *minimum* mense Decembri anno 1775? respondebit fane, die 8^{va}. Atqui *minimum* hujus diei omnino *spurium* arbitror; sed illud *genuinum* esse ajo, quod die 26 accidit; erat enim *minimum* majoris cujusdam oscillationis, insigne, & omnibus commune. Verum nolo diutius inhaerere phaenomeno; si enim fallar: inhaerere operae pretium non erit. Quodsi autem verum habeam; rerum meteorologicarum amatores, & observatores majori ingenii acie instructos, rogatos volo, ut rem ad examen revocent, atque exiguum hunc conatum aequi saltem bonique consulant.

T a b u l a c o n t i n e n s

OBSERVATIONES RATISBONENSES

Autore Placido Heinrich.

Monitum.

Observationes sequentes ex diurnali excerpti copiosissimo, quod mihi concedidit observator, a me olim instructus & per plures jam annos exercitatus D. P. Placidus Heinrich ad S. Emmeranum Ratisbonae. Observare autem solet hic vir quotidie ad minimum decem vel duodecim vicibus horis sequentibus; nempe 1 post mediam noctem, dein horis matutinis 5, 7, 8, 9, 10 & circa meridiem. Vespertinis vero horis 2, 3, 5, 7 $\frac{1}{2}$, & 8, ac horis non nunquam intermediis & citius vel tardius etiam vespere. Ex hisce observationum horis colligere est, quousque pertineat certitudo illa temporum, quibus *maxima* & *minima* barometri assignavi, quae siquidem interdiu celebrata sunt, sane haud longe a vero aberrare existimo. Non nunquam vero *minima* quaedam & *maxima* duobus continuis diebus assignavi, ideo potissimum, quod quaedam *minima* & *maxima* spuria sint, ut in dissertatione mea nuper edita ostendi. Quum observator Ratisbonensis continuo (ut ita dicam) ad barometrum stare soleat; fortassis silentio non est praetereundum phaenomenon, quod die 21 Maji in diurnali suo adnotavit. Die enim praedicta hora post meridiem secunda barometri altitudo erat 26, 10, 7. Tum imminente faeva tempestate ventus S W vel S O (erat enim valde inconstans) vehementer crescebat. Hora tertia & minuto 45^{to}, eadem etiam erat barometri altitudo, venti vis maxima, pluvia & grando, quum subito facto tonitru barometrum descendeat ad 26, 10, 5, & statim post quinque temporis minuta ascendeat ad altitudinem 26, 10, 8.

Gradus hygrometri ab influxu caloris aut frigoris non sunt correcti.

Pluviae assignandae ratio eadem est, quae anno praecedente.

Danubii etiam incrementa & decrementa idem D. Wolfius geometra electoralis exercitatus observare pergit.

Loca lunae ideo non addo, quia nec horae observationum ad motum lunae praescriptae sunt.

Morbos denique dominantes ille observavit, quem in fine harum observationum nominavi, cujus etiam chyrographum descripsi.

Steiglehner,

in universitat. Ingolstadiensi Prof. P. O.

OBSERVATIONES RATISBONENSES.

Horae observationis ordinariae 7 mat. 2 pom. 8 vesp.

Inter denatos Catholicorum 258 infantes numerantur, qui octavum aetatis annum nondum attigerant.

Inter natos (potius baptifatos) Protestantium erant pueri 130; puellae 107.

Inter denatos Protestantium infantes sunt numero 160; adulti intra annum 60 — 70 denati sunt Protestantes 40, intra ann. 70 — 80 personae 30, intra ann. 80 — 87 personae 10, una vero annorum 91. Caeterum catholicorum tabula mense Junio incompleta est.

Morbi

Morbi praecipui per annum observati a Domino Winckler, archiatro secundo serenissimi Principis de Turre & Tassis.

- Januarius.* Diarheae biliosae spontaneae. Febres catharrales. Vomitus aeruginosus spontaneus. Variolae benignae. Dolores arthritici vagi.
- Februarius.* Febres catharrales, biliosae continuae: arthritis vaga saepius retrograda recidiva.
- Martius.* Febres erysipellaceae, scarlatina cum purpura, pleuritides seu peripneumoniae putridae subsequente purpura critica. Variolae spuriae.
- Aprilis.* Icterus frequentior & quidem in junioribus: febres catharrales: arthritis vaga: febres intermittentes.
- Majus.* Praesertim arthritis vaga & fixa grassabatur, ita ut in omnibus plateis reconvalescentes dolorifici conspicerentur: febres intermittentes, catharrales, scarlatina infantum. Febris rheumatico-catharralis *Russica*. Haec a 16 mensis Maji incipiebat & fere omnes Ratisbonae & ubique circumhabitantes affligebat.
- Junius.* Continuabat febris *Russica*. Vomitus aeruginosi spontanei. Colera.
- Julius.* Febris scarlatina cum purpura miliari cuspidi acus simili, & cum angina inflammatoria, gangraenosa sphacelosa lethali. Diarheae spontaneae & dissenteriae sporadicae.
- Augustus.* Febris scarlatina continuabat. Febris intermittens sporadica.
- September.* Febris scarlatina putrida spontaneo vel artefacto vomitu lenissime & sine periculo vitae transiit; male vero, vel omnimode non tractatam insequeretur tumor anasarcam referens fere semper lethalis. Aliquos tales patientes lotione frigidae post alvi evacuationes epicraticas restitui, an non ex aëre in humoribus putridis producto elastico ortus ille tumor? — Variolae benignae discretiae. Arthritis vaga & fixa.
- October.*
- November.* Anginae biliosae vomitu curatae. Febris scarlatina mitior. Erysipelas pustulosa macula lata Plateri.
- December.* Febris scarlatina. Septem infantes uno insultu affectos uno in cubili habitantes dato emetico feliciter & cito restitui. Oppressiones pectoris in sex patientibus similiter observatae. Febris biliosa sporadica.

Ephemer. anni 1782.

OBSERVATIONES MASSILIENSES

Autore

S. Jacques de Silva belle,

speculae regiae astronomicae Massiliensis praefecto.

URBIS DESCRIPTIO *).

Urbes veteres prope universae mutationes subiere, quibus vel penitus everſae, vel de pristina saltem magnitudine sua deturbatae fuerunt. Vicit temporum vicissitudines Massilia propterea, quod ea minus, quam urbes aliae, a publicae administrationis inconstantia pendeat. In commodo ejus ad mare mediterraneum situ divitiae ejus universae sunt positae, eritque ipsa centrum commercii Gallos inter & Italiam atque Archipelagum, quamdiu nationes inter se negotiabuntur. Hinc est, quod quantumvis Barbarorum excursionibus ac bellis civilibus vastata in pristinum se statum semper restituerit. Ejus enim industria non solis artibus luxum spectantibus continetur, sed velut basi ea necessitate nititur, quae homines impellit, ut mercium commutatione inter se communicent. Fuit urbs haec ante eas omnes, quas in Gallia novimus, atque post has erit, quia, ut sit, pauciorum rerum opus est conjunctione, & quia haec ipsa conjunctio ex regnorum conversionibus minus pendet.

R r r 2

Massilia

*) Ex gallico translata.

Massilia oppido magna & frequens est, tenetque inter urbes regni totius pulcherrimas locum. Ager ejus naturaliter sterilis omni fructuum genere abundat, id quod colonorum debetur solertiae, qui vi naturae quodammodo illata foli indolem fedula stercoreatione mutarunt. Adeo verum est, commercium non minus in agros, quam in populorum genium influere. Creat & foecundat, quocunque vis ejus porrigere se potest.

Nihilominus terrae hae tam bene cultae oculis viatorum non idem spectaculum atque illae obijciunt, quas Liger, Sequana, Ararisve interlabitur. In ripis Arenci, Jarreti & Huvoni (gallice Arenc, Jarret & Huveaune) prata nonnulla hortique existunt. Arencus & Jarretus duo parvi torrentes sunt, qui in ipso urbis territorio nascuntur. Huvonus exiguus est amnis, qui ex montibus sacrae speluncae excurrens leucae ab urbe intervallo in mare se exonerat. Partem agri reliquam vites, oleae & ficus occupant, quae una cum amygdalis ea arborum genera sunt, quae in eo praecipue coluntur. Siquid merito stupendum, id vis ea ingens est villarum, quarum numerus circiter quinque millia aequat. Hae cum in vicinia Massiliae admodum frequentes existant, fallacis genus imaginis oculis viatoris praebent, qui aliam se urbem videre existimat. Viriditatem illam, quae campos toto anno tegit, laete interfecant. Siquis in edito quodam loco existit, ex quo simul mare, urbem, agrosque conspicere possit, is spectaculo fruitur, quod semper novum videtur.

Ager Massiliensis cinctus est montibus, horizontem omni parte terminantibus, excepto Libonoto (SSW), qua mare in terras se infinuat. Nudi sunt hi montes, & e faxis calcariis compositi. Eorum, qui in parte boreali siti sunt, altitudo maxima libellam maris 400 hexapedis non superat; qui vero ad orientem & austrum vergunt, non amplius hexapedas 250 complectuntur.

Solum urbis valde inaequaliter planum est. Locus, quem specula occupat, eorum e numero est, qui maxime eminent. Aula, in qua barometrum est positum, libella maris 24 hexapedis altior est.

Clima Massiliense perquam mite est. Haud frequenter evenit, ut thermometrum ad quartum gradum infra punctum glaciale descendat; aestivo vero tempore gradum vigesimum sextum raro superat. Aestas ea tempestas est, qua atmosphaera variationes maximas subit, ordo tamen, quem hae servant, admodum constans est. Si Notapeliotes (SO) per dies aliquot vi paulo majore spirat, quamvis coelum diebus prioribus serenum appareat, aëris humores augeri, vaporesque mane & vespere ad horizontem densari cernuntur. Hi dein, cum ad certum gradum accumulati fuerint, nubes leviores efformant, quae subinde solvuntur in pluvias, frequentius vero a Borozeephyro (NW) dissipantur.

Tem-

Tempore aestivo Borozeephyrus raro flat diutius quam tres continentes dies, excipere autem semper ventum quendam orientalem solet. Ceterum, hos casus si exceperis, status aëris mirabili semper aequabilitate existit. Sole novo ventus ex oriente aestivo spirat. Hinc deinde incitato impetu ad plagam Notapeliotae (SO) vertitur, ubi matutini temporis partem maximam moratur. Posthaec constanter ex regione Notozeephyri (SW) allabitur. Tum, ut solis altitudo minuitur, vis ejus pedetentim remittit, atque occiduum hoc astrum atmosphaeram semper omnino tranquillam relinquit.

Menſe Septembri pluviae existunt periodicae, ab Apeliote & Notapeliote adductae. Si pluvius est autumnus, hi venti dominantur. Alias Borozeephyrus constantius spirat. Notapeliotes vere & autumnus dies parit ferenos, quin plagam Notozeephyri vespere trajiciat. Dum vero flat hyeme, coelum communiter nubibus est obductum.

Variationes directionis ventorum aestate semper austrum transeunt. Idem hyeme locum fere habet. Fit nihilominus posteriore hac tempestate, ut ventus ex oriente in occidentem per aquilonem transgrediatur. Tum vero violentus saepe evadit, & si procellas non gignit, saltem frigus in aërem, quanti hic capax est, maximum inducit. Venti dominantes in universum sunt Notapeliotes, Notozeephyrus & Borozeephyrus. At ex magno observationum numero compertum habeo, ventos occidentales quam orientales per tempus quadruplo majus regnare. *Mistral* Provinciales Borozeephyrum appellant. Hic ille ventus est, qui vi majore spirat, coeli temperiem rapidius mutat, & campis infestior existit.

Solide collocare instrumenta meteorologica, quod facere animo destinatum est, certa rerum adjuncta hucusque prohibuerunt. Hygrometrum in aula pendet, libero proinde aëri non expositum. Declinatorium eo, quo oportet, modo fixum non est. Sat habui, declinationem acus magneticae capere, instrumentum, ope umbrae in ipsa meridie a filo projectae, in linea meridionali collocando. Licet per plures annos bono declinatorio (furto dein ab opifice ablato) in observando usus sim, declinationem quotidianam sensibilem nullam deprehendi. Declinationem acus Electoralis Palatinae ex pluribus mensibus graduum 19 cum $\frac{1}{2}$ versus occidentem inveni. Ea paulo minor est in alio declinatorio, quod possideo.

OBSERVATIONES MASSILIENSES.

Horae observationis ordinariae 7 mat. 3 pom. 10 vesp.

September.

Summa.	poll. 11	lin. 9.1/12

Fecit coeli ficcitas, ut vindemia non adeo copiosa fuerit.

Olivae hoc anno rarae fuerunt. Quae nodos induerant, ficcitate dein pressae deciderunt. Quae maturuere, parvae manserunt, & fere omnes a vermibus vitiatae fuerunt.

OBSERVATIONES GENEVENSES

Autore

SENEBIER, reipublicae Genevensi a bibliotheca.

SITUS URBIS PRAEVIA DESCRIPTIO *).

Geneva in ripa lacus Lemani, atque in hujus extremitate sita est, ubi ejus aquae fluere incipientes Rhodanum constituunt, dimidii leucae quadrantis intervallo ab eo loco, quo Arva se in hunc fluvium effundit.

Quocunque oculi vertuntur, montes occurrunt, quorum proximi leuca & dimidia ab urbe distant. Ab hac ut solum recedit, sensim ad montes usque affurgit, quae res amphitheatrum perjucundum effingit, aliud simile montibus ipsis formantibus, quod horum humiliores, saltem qui ad Alpes sublimiores spectant, Geneva minus absint, qui vero longius hinc abscedunt, magis continuo magisque se attollant.

Clarissimus Deluc altitudinem lacus supra libellam maris mediterranei definivit, invenitque, eam 187 & $\frac{1}{2}$ hexapedarum gallicarum, sive 1125 pedum existere. Celebres astronomi nostri Mallet, Trembley & Pictet, latitudinem Genevae statuerunt 46°, 12, longitudinem vero 14 $\frac{3}{4}$ minutorum Parifina orientaliorem.

Musaeum, in quo barometrum observo, in parte urbis maxime edita est. Et vero ad inveniendam hujus altitudinem duas observationes sequentes eodem tempore institui. Die 21 Martii anni 1782, hora 5 vespertina, barometrum in libella lacus positum exhibebat 26 pollices, 9 lineas cum $\frac{4}{16}$, thermometer correctioni a Delucio destinatum 0; barometrum in musaeo 26 pollices, 8 lineas & $\frac{1}{32}$, thermometer ejusdem generis gradus 2 infra 0, sive circiter 8 gradus Reaumurianos (thermometerum Electorale Palatinum stabat ad 7° $\frac{7}{8}$). Differentia igitur erat 1 lineae & $\frac{7}{32}$.

*) E gallico traducta.

OBSERVATIONES GENEVENSES.

Horae observationis ordinariae 7 mat. 1 pom. 9 vesp.

A die 23 Junii inclusive usque ad 6 Julii exclusive, item a 1 Octobris usque ad 12 Novembris, observationes barometria cl. Pictet factae sunt, quibus 1.7/32 lin. addendae.

Januarius.

ANNOTATIONES *)

Januarius.

- Dies.
7 Magnam in barometro variationem ante ventum vehementem ex occidente al-
lapsum observavi.
18 Nivis pollices $2\frac{1}{2}$ dabant lineas $2\frac{1}{2}$ aquae.
19 Globus igneus cecidit, qui lunam hori-
zonti incumbentem magnitudine aequa-
re mihi visus est. Lux ejus pallida, dif-
fusio nulla. Versus lacum cum ferretur,
vestigia ejus observare nulla potui.

Februarius.

- 12, 16 & 17 ventus ex oriente spirans per-
quam vehemens.

Dies.

- 17 Lacus eo in loco, ubi Rhodanus fluere
incipit, glacie adstrictus, & per tres dies
pedibus trajectus est. Non nisi annis 1709
& 1755 hoc modo congelatus fuit.

Martius.

- 23 Tempore profundi hujus descensus baro-
metri Notozephyrus (Sw) faeviebat.

Majus.

- 23 ☉--☉ hora $8\frac{1}{2}$ matutina. Sol in centro
circuli erat, cujus in peripheria tres solis
imagines apparebant. A nonnullis ha-
rum quatuor observatae fuere. E solibus
falsis

*) E Gallico verbae.

falsis unus perpendiculariter vero immi-
nebat, reliqui ab hujus latere confiste-
bant. Imagines solares ante horam 11
disparebant, sed circulus solem ambiens
post meridiem adhuc videbatur. Margo
circuli, qua solem spectabat, fimbriis

prismaticae coloratis praecinctus, pars re-
liqua alba erat. Corpora omnia veluti
per reticulum tenuissimum aspecta appa-
rebant. Hgrometrum magnam siccita-
tem indicabat.

OBSERVATIONES BOTANICAE *).

Martius.

- Dies.
4 Segetes pullulascunt.
5 Primula veris floret.
6 Nucamenta coryli.
10 Caprifolium virefcit.
11 Mali armeniacaе uti & amygdali florent.
Sambucus emittit folia.
13 Spina appendix & racemaria gemmant.
28 Prata herbescunt.

Majus.

- Dies.
4 Querci, fraxini & nuces frondescent.
8 Propagines uvas emittunt.
Secale 3 pedes cum $\frac{1}{2}$ altum est.
Ficus gemmant.
14 Mori gemmant.

Junius.

- 2 Segetes spicantur.
Secale floret.
Medicae defecio.
17 Trifolium metitur.
20 Messis foenaria generalis.

Julius.

- 1 Sectura hordei.
9 Messis fecalis.
Vitis defloruit.
15 Messis tritici.

October.

Sub initium hujus mensis vindemia.

OBSERVATIONES

*) E Gallico fraductae.

OBSERVATIONES ZOOLOGICAE *).

Februarius.

Dies.
26 Anseres migrare incipiunt.

Martius.

2 Rusticulae migrant.
11 Cornices migrant.
13 Alauda canit.
27 Hirundines adveniunt.

Aprilis.

Dies.
4 Papilio diurnus alis rotundis.
Cuculus cantat.
11 Merulae nidificant.
22 Passeres nidificant.

Majus.

8 Coturnix cantat.

OBSERVATIONES HAGENSES

Autore

VAN SWINDEN, in curia Hollandiae caussarum patrono.

SITUS URBIS ET INSTRUMENTORUM.

HAGA COMITUM est vicus amoenissimus, ad distantiam duarum leucarum a magno Oceano, unius leucae ab urbe Delphenfi, trium leucarum ab urbe Leidenfi situs, in Oriente silva Hagenfi adumbratus, in Australi parte pulcherrimis pratis, in Occidente vero agris fertilibus, pomariis uberrimis, ruribusque amoenissimis, circumdatus est. Hac etiam in parte collibus arenosis (*de Duinen*) a magno Oceano & defensus & sejunctus est. Latitudo hujus vici est 52°. 4, longitudo ad Orientem Parisiorum 0. 7. 4.

Solum Hagae Comitum, ut & ubique in Hollandia, aequum planumque est.

Tres fuere, secundum monitum Illustrissimae Societatis Electoralis, quotidie observationes institutae, nullasque alias hisce tabulis inferui, nisi quas Societas Manheimensis desideravit. Sed plurimas, variisque horis, uti h. 10, 12, 6 & 11 schedulis meis annotavi. Majori hocce numero observationum varia & notabilia deteguntur phaenomena, quae minori numero non essent detecta. Has etiam Societati libenter offero, si ex illis utilitatem quamdam censeat esse eliciendam.

Barometrum

*.) Ex Gallico translatae.

Barometrum in parte interiori domus, ad altitudinem 24 pedum supra humum horti, suspensum est, secundum fenestram scalae spatiosae, ubi aëris temperatura, fere nulli, saltem non admodum sensibili, est obnoxia variationi. Solum autem domus meae pedes 16 supra altitudinem mediam seu libellam magni Oceani elevatum est. Haec omnia rite perpendenda sunt, dum inter causas minoris altitudinis Mercurii in tubo sunt numeranda.

Thermometrum aëri libero extra fenestram expositum, versus partes coeli N, NO, O & NW, ad eandem altitudinem ac barometrum, a radiis solis five reflexis, five directis, defensum est, nisi quodammodo media aestate.

Hygrometrum, prope thermometrum suspensum, aër liberrime cingit, sed pluvia nequam affici potest.

Acus declinatoria ad Monitum illustr. societatis super lapidem firmissime collocata est.

Non nisi duae ventorum directionum, singulis diebus, observationes hic reperiuntur. Nullam prorsus exinde posse fieri conclusionem fateor. Plurimas proprio usu notavi, aut hora 9 vespertina non fuit in mea potestate, ope solitorum versatilium signorum, venti directionem praecise annotare. Eorum vires etiam non addidi. Dum methodus eas pro arbitrio aestimandi ex motu arborum, aliove modo, nimis videbatur & fallax & incerta, ut fides ei habenda esset, praecipue media in urbe, ubi domus sat magnam ad altitudinem sunteductae. Secundum societatis Haganae praecepta ad motum molarum etiam intentus fui, sed haecce methodus plurimis quoque est obnoxia difficultatibus, molae cum non semper, quamvis ventus quidam cum vi flet, moventur. Utinam anemometrum cel. Bouguer aliudve, semper & ubique adhiberi posset.

Quantitatem pluviae aut evaporationis huc usque, varias ob causas, notare non valui. Saltem ita accurate & assidue, ut illustr. societate hae essent dignae observationes. Forfan post haec societas Hagana huic rei consulat. Aut quodammodo hoc vacuum supplevi, notando, quibusnam diebus plus, minusve pluviae cecidit.

Nec flumen nec amnis Hagam Comitum alluit, idcirco in me non fuit, altitudinem quotidianam aquarum notare.

Varia lunae puncta explicui. In columna *facies coeli* quam brevissime & perspicue potui, quae fuit facies coeli ab h. 7 usque ad 2 pomeridianam, & ab illa rursus usque ad h. 10 vespertinam notavi.

In meteorologicis, per hos 4 menses, nil notabile accidit, ideo annotationes speciales hic nullae reperiuntur.

Societas Hagana, quam citissime poterit, illustr. societati Electorali mittet specimen morborum his mensibus observatorum, una cum recensione natorum, mortuorumque.

Ast societas Hagana dolet se hic non potuisse addere observationes botanico-meteorologicas, ab illustr. societate Manheimensi desideratas. Media in urbe, & hucusque perito observatore, & simul *correspondenti*, ruri prope Hagam Comitum morante destituta, desiderio satisfacere non potuit, postea forsan hoc pensum etiam absolvit.

Tandem societas medico-meteorologica summopere exoptat, ut scopo illustr. societatis Electoralis & vinculo inter ambas stabilito satisficiant haecce observationes. Interea ille, cui haec provincia fuit demandata, maxime sibi gratulabitur, si hoc ita functus est officio, ut, quod ab illo expectabatur, simulque opinionem illustr. societatis Manheimensis rite perfecerit.

OBSERVATIONES HAGENSES.

Horae observationis ordinariae 7 mat. 2 pom. 9 vesp.

OBSERVATIONES HAGENSES

DECLINATIONUM

ACUS MAGNETICAE

Autore

G. VAN DER WEYDE.

§. 1.

QUONIAM ante omnia magni interest scire, ubinam observationes factae sunt, situmque loci cognoscere, de longitudine Hagae Comitum, verbum dicamus.

Ex variis observationibus astronomicis constat, ejus longitudinem esse $0, 7, 4$, ad Orientem Parisiarum, latitudinem vero $52^{\circ} 4$ borealem.

Acus declinatoria Societatis Meteorologicae Manheimensis, secundum monitum hujus Societatis, erecta in alto domus supra pedem lapideum firmissimum, magnaue cura in meridiano hujus loci collocata est. Insuper, ne variis meteoris, uti pluvia, grandine, vento &c. laederetur, capsula lignea cooperta est.

§. 2.

Cum variationes Acus Magneticae diversae sint, & a multis causis pendeant, proposui, observationes horarias instituere, atque ita sequi exemplum Celeb. Prof. I. H. van Swinden, & ejus fratris S. P. van Swinden; non tantum, ut inde determinarentur variationes diurnae, nocturnae, aliaeque, sed etiam ut de differentiis constaret inter declinationes & variationes hujus acus & acus, quae a Dom. S. P. van Swinden Hagae Comitum observatur, & constructa est secundum praecepta Celeb. Profess. van Swinden *), ideoque maxime differt ab acu Societatis Manheimensis.

§. 3.

*) Vide de constructione hujus acus: *Les mémoires des Mathématiques & de Physique présentés à l'Académie Royale des Sciences par divers savans*. Tom. VIII, Paris 1780.

§. 3.

Incipio observare acum magneticam hora 6 matutina, & pergo ad horam 10 vespertinam; observationes scribuntur in tabula, quae variis lineis tam verticalibus, quam horizontalibus in multas areolas divisa est.

Prima columna horizontalis indicat horas diei, & verticalis dies mensis. — Quotidie annoto *Medium verum*, quod ex summa observationum diei per numerum observationum divisa provenit.

Sequens columna differentiam inter medium verum diei & medium verum diei antecedentis continet.

Tertia columna indicat variationem diurnam totalem, id est, differentiam inter maximam & minimam.

Quarta columna continet variationem diurnam ad occidentem, id est, indicat, quantum acus a prima observatione diei ad Occidentem appropinquavit.

Quinta columna continet variationem diurnam ad Orientem, id est, indicat, quantum acus ab hora, qua declinatio maxima, five occidentalis, locum habuit, usque ad horam vespertinam versus Orientem retrogressa est.

Sexta columna indicat variationem nocturnam, quae est differentia inter ultimam observationem diei antecedentis & primam sequentis.

Septima columna exprimit variationem pro die, hoc est, differentiam inter primam observationem alicujus diei, & observationem diei sequentis.

Octava columna indicat maximam differentiam, quae inter easdem horas duorum dierum sese sequentium locum habet, & ideo vocatur maxima variatio 24 horarum.

Nona columna continet differentiam maximam inter duas horas sese sequentes, ideoque vocatur maxima variatio horaria.

Mense elapso annoto *maximum* & *minimum* singulae horae; *differentiam* inter *maximum* & *minimum*, *medium Arithmeticum*, *medium verum*, & *differentiam horariam*, quae est differentia inter medium verum duarum horarum sese sequentium.

Denique de maxima & minima declinatione, de differentia, de medio Arithmetico & medio vero pro integro mense, trimestri & semestri, mentionem facio.

OBSERVATIONES METELLOBURGENSES

Autore

VAN DE PERRE, ad Belgii foederati comitia a Zelandia delegato.

MONITUM OBSERVATORIS *).

Ut primum Instrumenta ab illustri societate meteorologica Palatina mihi missa rite collocaveram, has observationes orsus sum in insula Valachria, earum, quibus Zelandia belgica constat, omnium maxime occidentali. Eas partim institui in castro Westhofienfi, partim in urbe Metelloburgensi, hujus insulae, uti & provinciae totius metropoli. Primo loco a die 4 Julii ad 26 ejusdem, & ab 8 Augusti ad 25 Octobris; altero loco, seu Metelloburgi, reliquas. Et quoniam societas Electoralis brevem loci, in quo observationes fiunt, descriptionem desiderat, hanc in rem sequentia adferre necessum esse duxi. Insula ipsa, inter 20° & 20°, 16' longitudinis montis Pico in Teneriffa, atque inter 51°, 27', & 51°, 37' latitudinis sita, ambitum habet 7 circiter milliaria germanica continentem. Parte occidentali & boreali mari Atlantico, parte orientali & australi duobus Scaldis diversis ostiis terminatur. Solum ejus planum est, & perquam ferax frumento, pascuis, leguminibus, omnis generis fructibus, filvis caeduis & incaeduis. Septentrionem inter & occidentem, inter Austrum & occidentem, uti & Boream versus aggeribus terrenis littoralibus, qua vero occidentem respicit, celeberrima mole Westcapellae, tum aliis minoris momenti molibus Orientem & Austrum versus, contra maris fluctus munita est. Castrum Westhofienfe existit in parte insulae Boream inter & occidentem media, humo maxime edita, in distantia 255 perticarum (quarum singulae $\frac{9587}{10000}$ perticae Rhenanae 12 pedum constituunt), & in altitudine 3 pedum, 9 pollicum, cum aggeribus littoralibus coeunte, fabulosa quidem, attamen fertili. Castrum ipsum fossis & celsis arboribus circumdatum est. Observationes hic in altitudine 56 pedum supra solum instituuntur.

Urbs Metelloburgensis, perticis circiter 2550 a castro distans, sita est ad longitudinem 20°, 10', & ad latitudinem 51°, 31', 30', parte insulae orientem inter & austrum interjecta, ad alterum Scaldis ostium, quocum longi canalus interventu, qui illi pro portu est, communicat. Vallo & fossa, quatuorque procerarum arborum ordinibus, cum vallum tum oram fossae

fossae occupantium, cincta est. Circa eam horti olitorii ac fructiferis arboribus confiti, uti & prata nonnulla existunt. Circuitu suo perticas 1600, amplitudine vero jugera 396, five perticas quadratas 300, complectitur. Domus in ea 3900, incolae 20000 numerantur. Locus observationum in media circiter urbe existit, 23 pedibus supra solum elatus, quod ipsum hic, quam juxta castrum, 3 pedibus, 11 digitis humilior, atque adeo pari cum mari libra est.

Anemometrum, quo utor, a Bouguero, Hyetometrum & Evaporatorium a cl. Sedileau & Halley inventa sunt. Natorum ac denatorum indices ad solam urbem Metelloburgum spectant. In columna aestus maris observationes primum simplices, dein duplices occurrunt. Tam simplices istae, quam duplicium anteriores ante molem Westcapellae, duplicium posteriores Metelloburgi captae sunt. Utrisque tempus observationis a laeva adjunctum est *).

OBSERVATIONES METELLOBURGENSES.

Ex omnibus quinque horum mensium spatio extinctis erant Catholici 38, Lutherani 18, Reformati 231, Anabapt. 1, Judaei 2. Cives 269, Milites 21.

OBSERVATIONES BRUXELLENSIS,

JUSSU IMPERIALIS ET REGIAE ACADEMIAE SCIENTIARUM
ET BONARUM ARTIUM INSTITUTAE.

Bruellae nobilis urbs ducatus Brabantiae in Belgio, olim sedes regia principum, nunc praefectorum ipsi belgio pro Augusto. Sita est partim in clivo montium, partim in de-
preffiore loco. Irrigatur parvo fluvio *Senna* dicto, in Hannonia orto. Agri vicini fertiles sunt,
omniumque frugum feraces.

Latitudo hujus urbis est 50°, 51, longitudo 2°, 1, 4½ ad orientem meridiani Parisiensis.
Distantia ejus a mari proximiori 18 leucarum est. Observationes factae sunt in parte urbis
editiore.

OBSER-

*) Numeri mortuorum in hac ac praecedente tabula ex errore alicubi commisso non plane consentiunt.

OBSERVATIONES BRUXELLENSIS.

OBSERVATIONES

QUAEDAM AMERICANAE *)

Has observationes, quamvis instrumentis nostris factae non sint, Ephemeridibus nostris inferere non dubitamus, quod ob locorum, in quibus institutae sunt, situm & distantiam notatu perquam dignae videantur. Unde & a quo missae sint, sequentes litterae, ad societatis secretarium perscriptae, declarabunt.

VIR CLARISSIME.

Perlectis nuper ephemeridibus, connoissance des tems pour l'année 1784, inscriptis notitiam accepi novi Instituti, meteorologicae nempe societatis, a serenissimo Electore Palatino anno 1780 Manheimii erectae. Haftenus non intelleximus, quibus haec membris constet, quibus legibus teneatur, & quo studia sua potissimum vertat; num intra solius Europae terminos se contineat, aut an etiam observationes ex aliis terrae partibus colligat. Nihilominus id mihi sumo, ut observationes nonnullas meteorologicas, in America institutas, ad te mittam. Optimis, quae habemus, factae sunt instrumentis, quamquam ea perfectione destitutis, quae de instrumentis cura tua Manheimii fabricatis praedicatur. Quodsi futurum esse tibi videtur, ut hae observationes utilitatis aliquid in collectionibus vestris habeant, eas velut venerationis meae tesseram, ac velut exiguum conatum, ad institutum tam utile quidquam conferendi, societati vestrae exhibere ne graveris.

Dedi Cantabrigiae in America
die 26 Septembris 1783.

Additissimus tibi
SAMUEL WILLIAMS,
matheseos & physicae in universitate
Cantabrigiensi professor.

Responsum est viro doctissimo societatis nostrae jussu, & gratissimas sibi fuisse has observationes, & magnopere se exoptare, ut stationem meteorologicam Cantabrigiae nanciscatur; instrumenta, quae distribuere solet, se eo missuram, ut primum universitas, quae in hac urbe floret, de iis juxta societatis leges cauturam se esse significaverit.

OBSER-

*) Ex anglico traductae.

OBSERVATIONES

ex an. 1771 ad an. 1776,

Autore

SAMUELE WILLIAMS.

Tabellae sequentes confectaria continent capita observationum Bradfordiae, milliaribus 30 Cantabrigia versus Boream distitae, per annos sex institutarum. Ter indies factae sunt, scilicet hora 6 matutina, 12 meridiana, & 9 vespertina. Barometrum generis erat communis, thermometer Fahrenheitianum. Utrumque instrumentum a cl. Nairne Londini confectum in porticu domus inferiore, Borapelioten spectante, pendebat *).

In

*) Mensura in barometro & pluvia anglica est. Edit,

In America boreali venti hiberno tempore communiter ex W-N*), vere ex O-S allabuntur. Aestate Noti & Notozephyri spirant. Hac exeunte venti maxime variant. Plante Zephyro aut Borozeephyro sudum nobis & ferenum coelum est; at spirante Noto, Apeliote aut Borapeliote, aer pluvias plerumque aut nives fundit. Dies calidissimi a Noto & Notozephyro, frigidissimi a Borozeephyro adferuntur. Cum terra magis identidem magisque expurgetur, colatur, & foli pervia reddatur, clima mutatur, ac calidius continuo mitiusque evadit.

OBSERVATIONES

ex an. 1780, 1781 & 1782 **),

Autore

ETWARDIO WIGGLESWORTH,

Theologiae in universitate, quae Cantabrigiae in America est, professore.

Subjectae tabulae confectaria exhibent observationum triennialium, quae Cantabrigiae in America duabus quotidie vicibus, hora scilicet 8 matutina, & 1 pomeridiana, institutae fuerunt. Barometrum & thermometer, a cl. Champney Londini facta, in scalis juxta fenestram borealem collocata erant.

*) Quid interjecta hic lineola horizontalis significet, ad observationes Metelloburgenfes supra diximus. Edit.

**) Quae ad an. 1783 pertinent, ad volumen proximum reservamus. Edit.

Confectaria, quibus primo observationum anno acquiescendum esse iudicavimus, 21 tabulis praecedentibus comprehenduntur, quarum primae duodecim pro mensibus singulis praecipua observationum capita sistunt, reliquae tum particularia pro diversis observationum temporibus, tum pro observatoribus, qui currente jam anno suas observationes inchoarunt. Tabula denique ultima eadem confectaria ex omnibus totius anni observationibus exhibet, quae in prioribus tabulis pro singulis quibusvis mensibus deducta sunt.

Tam altitudines mediae barometri, quam medi gradus thermometrorum, hygrometri & acus declinatoriae ex omnibus unius mensis observationibus omni cura deductae sunt. Idem valet de altitudinibus mediis barometri (quas solas clarissimus Mayerus computavit) deque gradibus mediis thermometrorum, hygrometri & acus pro temporibus observationum matutinis, pomeridianis & vespertinis.

Ventorum species octo duntaxat retentae sunt, ea quidem ratione, ut cardinales quatuor Nord. Ost, Sud, & West simul collaterales proximas comprehendant. Sic plagae Nord v. g. annumerati sunt venti N, NNO, & NNW.

Nomine *Coeli facies* reliqua meteora omnia veniunt. Dies inter serenos computati sunt omnes illi, in quibus ter omnino aut bis saltem signum ☉, aut ter signum ☼ habetur. Eodem modo intelligendi sunt numeri dierum nubilorum, quibus annumerati sunt dies, quos tabulae observationum ter aut bis ad minimum signo == notant, signa reliqua = = = dies varios seu neque vere serenos nec omnimode nubilos constituunt. Dierum itaque serenorū, nubilorum, aut variorum denominatio a facie coeli diebus singulis dominante desumpta est.

Dies cum pluvia (aut nive) cum nebula, cum pruina, tonitruales, cum vento virium 3 aut 4 vocantur omnes illi, quibus vel semel pluvia, aut nebula notatur.

Reductiones barometri ob diversum mercurii calorem, aut hygrometri, aut mensurae aquae pluvialis in deducendis confectariis nullae adhibitae sunt, nec differentiae Meridianorum hoc saltem anno ratio habetur.

Caeterum pro eruendis ulterioribus corollariis plurimum interest, ut plurimum adhuc locorum, ex quibus observationes communicantur, magis exacta descriptio expectetur, tam quod situm observatorii respectu montium, fluminum, lacuum, plagae mundi, quam quod altitudinem concernit, in qua instrumenta a proximo v. g. flumine noto suspensa observantur, ne impigro sane labore erronea & falsa eruamus. Certe unica in dies adhibitis necessariis cautelis & tempore differentiae a Meridiano Manheimensi respondente instituta observatio majus excolendae Meteorologiae servitium praestabit.

Supremum punctum in columna marmorea ad Portum Ripeculae, in quo signata est omnium exundationum maxima, quae die 14. Decembris 1598. accidit, et quod in libellatione pavimenti ecclesiae collegii romani assumptum est.

37. 9.

Sectio Tiberis ad Portum Ripeculae, in qua suprema aquae superficies est in assumpta media altitudine, quaeque media altitudo est supra libellam maris ped. 20. Nūmeri post pedes signati sunt pollices.

Infimus gradus Portus.

Fundus Tiberis ad Portum Ripeculae observatus die 1. Jan. 1783.

Linea horizontalis ducta ex infima libella maris prope Portum Trajani an. 1744. In ista autem ora mare admodum procellosum. Supra infimam libellam elevatur ped. 3. poll. 9, communis vero et quotidianus fluxus est ped. 1. poll. 9.
